Advanced Monographs In Signal Processing:

Advanced Topics in Signal Processing Jae S. Lim, Alan V. Oppenheim, 1988 Books in Series, 1985 Vols for 1980 issued in three parts Series Authors and Titles Sequential Monte Carlo Methods for Nonlinear Discrete-Time Filtering Marcelo G. S. Bruno, Marcelo G.S., 2022-06-01 In these notes we introduce particle filtering as a recursive importance sampling method that approximates the minimum mean square error MMSE estimate of a sequence of hidden state vectors in scenarios where the joint probability distribution of the states and the observations is non Gaussian and therefore closed form analytical expressions for the MMSE estimate are generally unavailable We begin the notes with a review of Bayesian approaches to static i.e. time invariant parameter estimation In the sequel we describe the solution to the problem of sequential state estimation in linear Gaussian dynamic models which corresponds to the well known Kalman or Kalman Bucy filter Finally we move to the general nonlinear non Gaussian stochastic filtering problem and present particle filtering as a sequential Monte Carlo approach to solve that problem in a statistically optimal way We review several techniques to improve the performance of particle filters including importance function optimization particle resampling Markov Chain Monte Carlo move steps auxiliary particle filtering and regularized particle filtering We also discuss Rao Blackwellized particle filtering as a technique that is particularly well suited for many relevant applications such as fault detection and inertial navigation Finally we conclude the notes with a discussion on the emerging topic of distributed particle filtering using multiple processors located at remote nodes in a sensor network Throughout the notes we often assume a more general framework than in most introductory textbooks by allowing either the observation model or the hidden state dynamic model to include unknown parameters In a fully Bayesian fashion we treat those unknown parameters also as random variables Using suitable dynamic conjugate priors that approach can be applied then to perform joint state and parameter estimation Table of Contents Introduction Bayesian Estimation of Static Vectors The Stochastic Filtering Problem Sequential Monte Carlo Methods Sampling Importance Resampling SIR Filter Importance Function Selection Markov Chain Monte Carlo Move Step Rao Blackwellized Particle Filters Auxiliary Particle Filter Regularized Particle Filters Cooperative Filtering with Multiple Observers Application Examples Summary **Processing of Seismic Reflection Data Using MATLAB** Wail A. Mousa, Abdullatif A. Al-Shuhail, 2022-05-31 This short book is for students professors and professionals interested in signal processing of seismic data using MATLAB™ The step by step demo of the full reflection seismic data processing workflow using a complete real seismic data set places itself as a very useful feature of the book This is especially true when students are performing their projects and when professors and researchers are testing their new developed algorithms in MATLAB™ for processing seismic data The book provides the basic seismic and signal processing theory required for each chapter and shows how to process the data from raw field records to a final image of the subsurface all using MATLAB™ The MATLAB™ codes and seismic data can be downloaded here Table of Contents Seismic Data Processing A Quick

Overview Examination of A Real Seismic Data Set Quality Control of Real Seismic Data Seismic Noise Attenuation Seismic Deconvolution Carrying the Processing Forward Static Corrections Seismic Migration Concluding Remarks **Seismic Applications of Homomorphic Signal Processing** José Manuel Tribolet,1979 *An Introduction to Kalman Filtering with MATLAB Examples* Narayan Kovvali,Mahesh Banavar,Andreas Spanias,2022-06-01 The Kalman filter is the Bayesian optimum solution to the problem of sequentially estimating the states of a dynamical system in which the state evolution and measurement processes are both linear and Gaussian Given the ubiquity of such systems the Kalman filter finds use in a variety of applications e g target tracking guidance and navigation and communications systems The purpose of this book is to present a brief introduction to Kalman filtering The theoretical framework of the Kalman filter is first presented followed by examples showing its use in practical applications Extensions of the method to nonlinear problems and distributed applications are discussed A software implementation of the algorithm in the MATLAB programming language is provided as well as MATLAB code for several example applications discussed in the manuscript **Advanced Digital Signal Processing** John G. Proakis,1992 *Anywhere-Anytime Signals and Systems Laboratory* Nasser Kehtarnavaz,Fatemeh Saki,2022-11-10 A typical undergraduate electrical engineering curriculum incorporates a signals and systems course The widely used approach for the laboratory component of such courses involves the utilization of MATLAB to implement signals and systems concepts This book presents a newly developed laboratory paradigm where MATLAB codes are made to run on smartphones which most students already possess This smartphone based approach enables an anywhere anytime platform for students to conduct signals and systems experiments This book covers the laboratory experiments that are normally covered in signals and systems courses and discusses how to run MATLAB codes for these experiments on smartphones thus enabling a truly mobile laboratory environment for students to learn the implementation aspects of signals and systems concepts A zipped file of the codes discussed in the book can be acquired via the website <http://sites.fastspring.com/bookcodes/product/SignalsSystemsBookcodes> **Number Theory in Digital Signal Processing** James H. McClellan,Charles M. Rader,1979 **Subject Guide to Books in Print** ,2001 **Advanced Signal Processing Handbook** Stergios Stergiopoulos,2018 *Advanced Concepts in Adaptive Signal Processing* W. Kenneth Jenkins,Andrew W. Hull,Jeffrey C. Strait,Bernard A. Schnaufer,Xiaohui Li,2012-12-06 Although adaptive filtering and adaptive array processing began with research and development efforts in the late 1950 s and early 1960 s it was not until the publication of the pioneering books by Honig and Messerschmitt in 1984 and Widrow and Stearns in 1985 that the field of adaptive signal processing began to emerge as a distinct discipline in its own right Since 1984 many new books have been published on adaptive signal processing which serve to define what we will refer to throughout this book as conventional adaptive signal processing These books deal primarily with basic architectures and algorithms for adaptive filtering and adaptive array processing with many of them emphasizing practical applications Most of the existing textbooks on adaptive signal processing focus on finite

impulse response FIR filter structures that are trained with strategies based on steepest descent optimization or more precisely the least mean square LMS approximation to steepest descent While literally hundreds of archival research papers have been published that deal with more advanced adaptive filtering concepts none of the current books attempt to treat these advanced concepts in a unified framework The goal of this new book is to present a number of important but not so well known topics that currently exist scattered in the research literature The book also documents some new results that have been conceived and developed through research conducted at the University of Illinois during the past five years
