Advances in Randomized Parallel Computing Panos M. Pardalos, Sanguthevar Rajasekaran, 1999-05-31 The technique of randomization has become very prevalent since it offers superior performance and simplicity Numerous researchers work in this area of vital importance Parallel Computing is also very important since one can get excellent speedups using parallel computers This book combines these two domains It provides a summary of the state of the art results and techniques in the area of randomized parallel computing There are few texts in the area of randomized computing and more surprisingly there is no text in the area of randomized parallel computing Thus our book fills the void in this very important area Audience This is a reference book for researchers educators and students It can also be used as a text for an advanced graduate course on randomized computing parallel computing or distributed computing

Communicating Process Architectures 2004 Ian East, J. Martin, P.H. Welch, 2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and hardware application and infrastructure which reflects the nature of the discipline
