Advances In Logic Programming Theory:

Advances in Logic Programming Theory Giorgio Levi, 2023 Logic programming has emerged over the last 15 years as one of the most promising new programming paradigms and an active research area This volume presents in a systematic fashion discussions of the many recent advances

Advances in Logic Programming Theory Giorgio Levi, 1994 Logic programming has emerged over the last 5 years as one of the most promising new programming paradigms and as a very active research area The PROLOG experience has shown that relevant problems in areas such as expert systems deductive databases knowledge representation and rapid prototyping can profitably be tackled by logic programming technology It has also shown that the performance of PROLOG systems can be made comparable with more traditional programming languages by means of sophisticated optimization and implementation of the design of a new class of languages the concurrent logic languages Many recent advances in the theory of logic programs are related to extensions of the basic positive logic language and the related semantic problems The original non monotonic negation as failure rule has been extended in various ways and provided with new declarative characterisations Other new language constructs are constraints which lead to a very important extension of the paradigm which allows us to compute on new domains concurrency and modules and objects This book written by a team of international experts goes beyond the classical theory to discuss the many recent advances for the first time in a systematic form

Advances in Inductive Logic Programming Luc de Raedt, 1996 Inductive Logic Programming is a research area situated in machine learning and logic programming two subfields of artificial intelligence The goal of inductive logic programming is to develop theories techniques and tools for inducing hypotheses from observations using the representations from computational logic Inductive Logic Programming has a high potential for applications in data mining automated scientific discovery knowledge discovery in databases as well as automatic programming This book provides a detailed state of the art overview of Inductive Logic Programming as well as a collection of recent technical contributions to Inductive Logic Programming The state of the art overview is based on among others the successful ESPRIT basic research project no 6020 on Inductive Logic Programming funded by the European Commission from 1992 till 1995 It highlights some of the most important recent results within Inductive Logic Programming and can be used as a thorough introduction to the field This book is relevant to students researchers and practitioners of artificial intelligence and computer science especially those concerned with machine learning data mining and computational logic
