Petroleum Exporting Countries. General Secretariat, 2006 **A Systematic Approach to Measuring the Social Behavior  
of Bottlenose Dolphins** Amy Samuels, 1996 Research on cetacean social behavior is in transition from descriptive natural  
history to quantitative analyses To expedite this change an intellectual history of the field is provided from the early whaler  
naturalists to oceanarium observations whale carcass studies pseud scientific inquiries into human dolphin communication  
and longterm field studies Subsequent chapters illustrate use of systematic methodologies to better understand bottlenose  
dolphin social relations Samuels and Gifford adapted a quantitative technique from primate behavioral research to study  
agonism among captive dolphins Males were dominant to females females had stable age ordered dominance relations and  
two males had a changeable dominance relationship Sex differences in dominance relations generated predictions about the  
behavior of wild dolphins that can be tested using this technique Samuels Richards and Mann investigated the association of  
wild juvenile dolphins with their mothers after weaning Juvenile daughters continued to associate with their mothers  
whereas juvenile sons rarely did so even though they remained in the same area as their mothers Sex differences in juvenile  
association patterns appeared to foreshadow adult social networks Samuels and Spradlin applied quantitative behavioral  
techniques to evaluate dolphin behavior in Swim With Dolphins programs Two program types were defined by presence  
Controlled or absence Not Controlled of explicit trainer regulation of dolphin with human interactions In Not Controlled  
programs the behavior of dolphins and humans threatened human safety and dolphin well being whereas Controlled  
programs effectively minimized behaviors that posed risk to dolphins or humans *Energy Economist*, 2000 **The
