Chemoreception From Cellular Signalling To Functional Plasticity:

Chemoreception from Cellular Signaling to Functional Plasticity, 2003 **Chemoreception** Jean-Marc Pequignot, Constancio Gonzalez, Colin A. Nurse, Nanduri R. Prabhakar, Yvette Dalmaz, 2012-12-06 Since 1959 the International Society of Arterial Chemoreception ISAC has organized in a variety of countries fifteen scientific meetings devoted to the mechanisms of peripheral arterial chemoreception and chemoreceptor reflexes After the meeting held in Philadelphia with Sukhamay Lahiri as president ISAC membership elected Lyon CNRS University Claude Bernard France as the site of the xv ISAC Symposium The Symposium was effectively held in Lyon from the 18th to the 22nd of November 2002 and Jean Marc Pequignot was its president The organizers were Jean Marc Pequignot and Yvette Dalmaz Lyon CNRS University Claude Bernard France and the Scientific Committee was formed by John Carroll University of Arkansas for Medical Sciences USA Constancio Gonzalez University of Valladolid Spain Prem Kumar University of Birmingham U K Sukhamay Lahiri University of Pennsylvania Philadelphia USA Colin Nurse McMaster University Hamilton Ontario Canada and Nanduri Prabhakar Case Western University Cleveland Ohio USA The Symposium in Lyon intended to follow the path opened in Philadelphia gathering people working at the interface of cellular and molecular biology with researchers in the more classical topics of chemoreception pathways and reflexes The aim was to join experts with different perspectives Along these lines some participants are engaged in the exploration of the intimate mechanisms of oxygen sensing and cellular responses with their work centered in a great number of preparations covering a broad spectrum from bacteria to chemoreceptor cells or to central nervous systems neurons *Fish Physiology: Sensory Systems Neuroscience* Toshiaki J. Hara, Barbara Zielinski, 2006-10-17 Fish sensory systems have been extensively studied not only because of a wide general interest in the behavioral and sensory physiology of this group but also because fishes are well suited as biological models for studies of sensory systems *Fish Physiology Sensory Systems Neuroscience* describes how fish are able to perceive their physical and biological surroundings and highlights some of the exciting developments in molecular biology of fish sensory systems Volume 25 in the *Fish Physiology* series offers the only updated thorough examination of fish sensory systems at the molecular cellular and systems levels Offers a comprehensive account of the present state of science in this rapidly expanding and developing field New physiological techniques presented to enable examining responses at the cellular and system levels Discusses fish sensory systems and how they have adapted to the physiological challenges presented by an aquatic environment **Arterial Chemoreceptors** Estelle B. Gauda, Maria Emilia Monteiro, Nanduri Prabhakar, Christopher Wyatt, Harold D. Schultz, 2018-10-24 This volume contains reviews and brief research articles from participants attending the International Society for Arterial Chemoreception meeting to be held in the USA July 2017 Each article contains original data and represents up to date information concerning the carotid body and oxygen sensing in health and disease This volume is a required text for all researchers in the field of arterial chemoreception and will provide a valuable reference source for years

Walker, Emmanuelle Jacquin-Joly, Sharon R. Hill, 2016-06-11 Olfaction and taste are of critical importance to insects and other animals since vital behaviours including mate food and host seeking as well as predator and toxin avoidance are guided by chemosensory cues Mate and habitat choice are to a large extent determined by chemical signals and chemoreceptors contribute accordingly to pre mating isolation barriers and speciation In addition to fundamental physiological ecological and evolutionary consideration the knowledge of insect taste and especially olfaction is also of great importance to human economies since it facilitates a more informed approach to the management of insect pests of agricultural crops and forests and insect vectors of disease Chemoreceptors which bind to external chemical signals and then transform and send the sensory information to the brain are at the core of the peripheral olfactory and gustatory system and have thus been the focus of recent research in chemical ecology Specifically emphasis has been placed on functional characterization of olfactory receptor genes which are derived from three large gene families namely the odorant receptors gustatory receptors and ionotropic receptors Spatial expression patterns of olfactory receptors in diverse chemosensory tissues provide information on divergent functions with regards to ecologically relevant behaviours On the other hand characterization of olfactory receptor activation profiles or deorphanization provides complimentary data on the molecular range of receptivity to the fundamental unit of the olfactory sense The aim of this Research Topic is to give an update on the breadth and depth of research currently in progress related to understanding the molecular mechanisms of insect chemoreception with specific emphasis on the olfactory receptors [Biomedical Index to PHS-supported Research](#), 1995
