Detached Retinas

Edward L. Oatman

Detached Retinas:

na Andreas Reichenbach, Andreas Bringmann, 2011-02-18 Müller cells make up just 0.005% of the cells in our central nervous system. They do not belong to the more esteemed family of neuronal cells but to the glia, a family of cells that until recently were seen as mere filling material between the neurons. Now, however, all that has changed. Sharing the insights of more than a quarter century of research into Müller cells, Drs. Andreas Reichenbach and Andreas Bringmann of Leipzig University make a compelling case for the central role Müller cells play. Everyone agrees that the eye is a very special and versatile sense organ, yet it has turned out in recent years that Müller cells are peculiar and multipotent glial cells. In the retina of most vertebrates and even of many mammals, Müller cells are the only type of macroglial cells; thus, they are responsible for a wealth of neuron-supportive functions that in the brain rely upon a division of labour among astrocytes, oligodendrocytes, and ependymal cells. Even beyond such a role in the central nervous system, as model glia, Müller cells are adapted to several exciting roles in support of vision. They deliver the light stimuli to the photoreceptor cells in the inverted vertebrate retina, aid the processing of visual information, and are responsible for the homeostatic maintenance of the retinal extracellular milieu. In *Müller Cells in the Healthy and Diseased Retina*, aimed not just at neurobiologists but at anyone concerned with retinal degeneration, every angle of Müller cells is covered, from an introduction to their basic properties through their roles as light cables and shock absorbers to the part they play in diseases and disorders of the eye. Once these have all been covered in detail, the authors move on to discuss the future direction of research into these small but potent cellular phenomena.

About the Authors: Dr. Andreas Reichenbach was born in 1950 in Leipzig, Germany. He studied medicine and specialized as a physiologist working on the mammalian retina. Since 1984, he has focused his efforts and those of a growing number of fellows in his team on Müller cell research. He has held a professorship at Leipzig University since 1994. After studying biology, Dr. Andreas Bringmann (1960) worked in the field of systemic neurophysiology until he was inspired in 1996 by Andreas Reichenbach to research the most interesting cell, the Müller cell. He is now in the Department of Ophthalmology of the University of Leipzig, where he is the head of the Basic Research Laboratory.

Retinal Glia Andreas Reichenbach, Andreas Bringmann, 2015-02-01 In 1851, Heinrich Müller discovered what he called radial fibers, and what we now call Müller cells, as the principal glial cells of the vertebrate retina. Later, other glial cell types were found in the retina, including astrocytes, microglia, and even oligodendrocytes. It turned out that retinal glial cells are essential constituents of the tissue. For instance, Müller cells appear to constitute the core of columnar units of clonally and functionally related groups of neurons. Their primary function is to support neuronal functioning by guiding the light towards the photoreceptor cells, removing excess neurotransmitter molecules from extracellular space, and performing efficient clearance of excess extracellular potassium ions. The latter two functions are also crucial for neuronal survival and are coupled to water clearance, which is also essential. Müller cells are capable of sensing neuronal activity and modifying it by the release of signal

substances gliotransmitters In cases of retinal injuries the M ller cells become reactive and all above mentioned functions are impaired However such de differentiated M ller cells may proliferate and may even serve as stem cells for the regeneration of a damaged retina As well as the M ller cells retinal astrocytes and microglial cells are important players in retinal development and function This book gives a comprehensive survey of the present knowledge on retinal glia Retinal Detachment and Allied Diseases Charles L.
