**A Framework for Educating Health Professionals to Address the Social Determinants of Health** National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Global Health, Committee on Educating Health Professionals to Address the Social Determinants of Health, 2016-11-14 The World Health Organization defines the social determinants of health as the conditions in which people are born grow work live and age and the wider set of forces and systems shaping the conditions of daily life These forces and systems include economic policies development agendas cultural and social norms social policies and political systems In an era of pronounced human migration changing demographics and growing financial gaps between rich and poor a fundamental understanding of how the conditions and circumstances in which individuals and populations exist affect mental and physical health is imperative Educating health professionals about the social determinants of health generates awareness among those professionals about the potential root causes of ill health and the importance of addressing them in and with communities contributing to more effective strategies for improving health and health care for underserved individuals communities and populations Recently the National Academies of Sciences Engineering and Medicine convened a workshop to develop a high level framework for such health professional education A Framework for Educating Health Professionals to Address the Social Determinants of Health also puts forth a conceptual model for the framework s use with the goal of helping stakeholder groups envision ways in which organizations education and communities can come together to address health inequalities *Social determinants of health* Laurie Hinnant, Sara Hairgrove, Heather Kane, Jason Williams, Jessica Duncan Cance, 2022-12-12 In recent years the number of publicly available tools and indices assessing social determinants of health SDOH has grown exponentially While many of these indices have been developed to assist researchers and practitioners with identifying vulnerable communities it is difficult to determine the most appropriate measure index or combination of indices to use given the research question of interest This paper presents an overview of the most commonly included indices highlights commonalities and identifies

some differences in what they measure We also discuss challenges with using these measures including the use of state level data to examine local level issues and how the use of atheoretical indices challenges the application of SDOH measurement Findings are intended to provide researchers and practitioners with information about SDOH data available through these common indices to inform how they are applied based on the needs of their work

**Social Determinants of Health** M. G. Marmot, Richard G. Wilkinson, 1999 Social Determinants of Health provides an authoritative overview of the social and economic factors which are now known to be the most powerful determinants of population health in modern societies Written by acknowledged experts in each field it provides accessible summaries of the scientific justification for isolating different aspects of social and economic life as the primary determinants of a population's health Recognition of the power of socioeconomic factors as determinants of health came initially from research on health inequalities This has led to a view of health as not simply about individual behaviour or exposure to risk but how the socially and economically structured way of life of a population shapes its health Thus exercise and accidents are as much about a society's transport system as about individual decisions and the nation's diet involves agriculture food manufacture retailing and personal incomes as much as individual choice But a major new element in the picture we have developed is the importance of the social or psychosocial environment to health For example health in the workplace for most employees certainly office workers is less a matter of exposure to physical health hazards as of the social environment of how supportive it is whether people have control over their work whether their jobs are secure A similar picture emerges in other areas ranging from the health importance of the emotional environment in early childhood to the need for more socially cohesive communities In 1998 the European Office of the World Health Organization launched a campaign to encourage the public and policy makers to take action on the social determinants of health Members of the International Centre for Health and Society who advised the WHO Centre for Urban Health and produced the text for the campaign booklet have now produced Social Determinants of Health to provide the scientific evidence behind the recommendations covering ten key areas of public policy Social Determinants of Health should be read by all those interested in the well being of modern societies It is a must for public health professionals for health promotion specialists and for people working in the many fields of public policy which we now know make such an important contribution to health
