language English abstract The increasing importance of offshoring as a strategic tool for firms which possess substantial
resources in high cost locations is reflected in the increasing quantity and value of work being offshored The offshoring of
Automotive Product Development Processes generically called Automotive Engineering Services serves not only to reduce
developmental costs for firms but can also help firms develop resources in fast growing markets which can also act as an
important source of future revenue The trend of offshoring Automotive Engineering Services ES activities to India is
becoming increasingly important Of the 15 billion offshore ES market including automotive and other ES activities India
claimed 12% in 2005 Experts claim that this value will increase to 40 billion by 2020 representing a market share of 25% The
increasing importance of ES offshoring is reflected in increasing investments and acquisitions of Indian firms in this business
area The dynamic situation being faced by firms wishing to offshore ES work to India necessitates a decision support
methodology which was outlined in this work Introduction to Present Work The present project aimed to provide offshoring

decision support to automotive product development firms located in Germany W Europe by answering the following two questions 1 Which process steps in the automotive product development process are best offshored Which process steps should be retained in house onshore 2 In case of offshore partnerships which criteria may be used to evaluate prospective offshore partners Offshoreability The offshoreability of an organizational process may be defined as the ease with which it may be offshored to another location without losing any of its value or efficiency Offshoreability thus depends on many factors the main factors have been summarized within this work The concept of offshoreability may thus be used to make offshoring decisions regarding the processes or process steps to be offshored to decide upon measures upgrades that may increase offshoreability and thus the benefit from offshoring and to decide upon factors which may be used to evaluate possible offshore partners
