Deterministic Methods In Systems Hydrology:

Deterministic Methods in Systems Hydrology James C.I. Dooge, Philip O'Kane, 2017-07-12 Deterministic Methods in Systems Hydrology presents the basic theory underlying the multitude of parameter rich models which dominate the hydrological literature Its objectives are to introduce the elements of systems science as applied to hydrological problems to present flood prediction and flood routing as problems in linear systems theory clarifying the basic assumptions and evaluating their accuracy and to review and to evaluate some deterministic models of components of the hydrological cycle with a view to assembling the most appropriate model of catchment response for a particular problem in applied hydrology The material is developed in two parts the first four chapters present the systems viewpoint the nature of hydrological systems some systems mathematics and their application to direct storm runoff The final four chapters cover linear conceptual models of direct runoff the fitting of conceptual models to data simple models of subsurface flow and non linear deterministic models

Hydrological Modelling in Arid and Semi-Arid Areas Howard Wheater, Soroosh Sorooshian, K. D. Sharma, 2007-11-22 Arid and semi arid regions are defined as areas where water is at its most scarce The hydrological regime in these areas is extreme and highly variable and they face great pressures to deliver and manage freshwater resources However there is no guidance on the decision support tools that are needed to underpin flood and water resource management in arid areas UNESCO initiated the Global network for Water and Development Information for arid lands GWADI and arranged a workshop of the world s leading experts to discuss these issues This book presents chapters from contributors to the workshop and includes case studies from the world s major arid regions to demonstrate model applications and web links to tutorials and state of the art modelling software This volume is a valuable reference for researchers and engineers working on the water resources of arid and semi arid regions
