## **Developing Effective Engineering**

### **Foreword**

With the demise of the 'Cold War' and all of the cloak and dagger activities changing in today's world, the only real threat to industry in the 'free world' is a Company's inattention to its own capability. That capability translates into the employees' knowledge, skill and attitude toward the effective and efficient accomplishment of the product, including the long-term existence of the Company itself.

As this book will illustrate, the free world's Companies are in a state of crisis today. Many of our elite and prestigious corporations are ignoring the need to establish their baselines. They are ignoring the need to develop objectives, plans and follow-through that expand and improve on those baselines to become better more efficient operating units.

The purpose of this book is to present as many 'image awakening' examples as can be achieved from the literature at hand and the experiences of the authors. With these 'awakening' experiences, one hopes that it will become apparent to the reader that new priorities need to be established by management of the engineering community:

first, to use your engineering background to establish credible baselines in all that you do;

second, to take into account the corporate or Company history and the lessons that can be learned from it;

third, to establish and maintain credible processes that produce for the organisation;

and fourth, to embrace change in an organized and capable fashion that will maintain the Company, support its existence, and support you as an employee with current and capable skills for the good of that organization.

It is our strong belief that we can improve our industrial structure with some of the simple steps we've provided in the text. We have tried to stimulate some thought with our questions and ideas at the ends of the chapters. We hope that this will stimulate more thought in the classrooms where we believe this book can best be utilised.
