Rethinking Development Economics Ha-Joon Chang, 2003 Impressive provides a very good compendium of what are usually classified as heterodox development economics an excellent volume Journal of International Development This important new collection tackles the failure of neoliberal reform to generate longterm growth and reduce poverty in many developing and transition economies As dramatically demonstrated in the collapse of the WTO s Seattle talks there is increasing dissatisfaction in both developing and developed countries with the emerging neoliberal global economic order The resignations of Joseph Stiglitz and Ravi Kanbur from the World Bank emphasize that this disillusionment with the orthodoxy now exists at the very heart of the establishment Yet the increasing demand for an alternative to this orthodoxy is not being met Over the last few decades the older generation of development economists have been edged out of most major universities particularly in the USA The situation in most developing countries is even worse although there is more demand for alternatives to orthodox development economics these countries have even less capability to generate such alternatives Rethinking Development Economics is intended to fill this gap It addresses key issues in development economics ranging from macroeconomics finance and governance to trade industry agriculture and poverty Bringing together some of the foremost names in the field this comprehensive and timely collection constitutes a critical staging post in the future of development economics

Development Economics Shahrukh Rafi Khan, 2019-10-23 Following the 2007 2009 financial and economic crises there has been an unprecedented demand among economics students for an alternative approach which offers a historical institutional and multidisciplinary treatment of the discipline Economic development lends itself ideally to meet this demand yet most undergraduate textbooks do not reflect this This book will fill this gap presenting all the core material needed to teach development economics in a one semester course while also addressing the need for a new economics and offering flexibility to instructors Rather than taking the typical approach of organizing by topic the book uses theories and debates to guide its structure This will allow students to see different perspectives on key development questions and therefore to understand more fully the contested nature of many key areas of development economics The book can be used as a standalone textbook on development economics or to

accompany a more traditional text

Understanding Development Economics Adam Fforde, 2014-01-03 Important parts of development practice especially in key institutions such as the World Bank are dominated by economists In contrast Development Studies is largely based upon multidisciplinary work in which anthropologists human geographers sociologists and others play important roles Hence a tension has arisen between the claims made by Development Economics to be a scientific measurable discipline prone to wide usage of mathematical modelling and the more discursive practice based approach favoured by Development Studies The aim of this book is to show how the two disciplines have interacted as well as how they differ This is crucial in forming an understanding of development work and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries This book introduces Development Economics to those coming from two different but linked perspectives economists and students of development who are not economists In both explaining and critiquing Development Economics the book is able to suggest the implications of these findings for Development Studies and more broadly for development policy and its outcomes

The Revolution in Development Economics James A. Dorn, Steve H. Hanke, Alan A. Walters, 1998-04-01 For decades development economists believed that central planning not economic freedom was the key to economic growth in developing countries In 1956 Gunnar Myrdal winner of the Nobel Prize in economics in 1974 wrote The special advisers to underdeveloped countries who have taken the time and trouble to acquaint themselves with the problem all recommend central planning as the first condition of progress While the argument that socialism is the key to growth in the developing world appears obviously unreasonable today given the collapse of command and control economies around the globe it was when Myrdal wrote the academic consensus Only a few economists doubted such arguments and proposed alternatives Foremost among them was Peter Bauer author of such classics as *The Economics of Under Developed Countries* and *Dissent on Development* This book contains 20 essays many of which were originally published in the *Cato Journal* and a foreword by Vclav Klaus former prime minister of the Czech Republic

Development Economics : From the Poverty to the Wealth of Nations Yujiro Hayami, 2001-02-15 A comprehensive and systematic account of the core topics in development economics this book

examines the reasons why a few countries have achieved a high level of affluence while the majority remain poor and stagnant. It represents an original combination of classical political economy, modern institutional theory, and current development issues bound together through the East Asian development experience. This fully revised second edition also analyses some recent changes and newly emerged problems relevant to the global economy. This textbook provides a comprehensive systematic treatise on development economics combining classical political economy, modern institutional theory, and current development issues. It has grown out of thirty years experience of teaching undergraduate and postgraduate students in the United States, Japan, and other parts of Asia. The treatment is global although the organizing principle is the East Asian development experience. Quantitative characteristics of Third World development in terms of population growth, natural resource depletion, capital accumulation, and technological change are outlined, but the central approach is comparative institutional analysis. Development Economics addresses one major question: Why has a small set of countries achieved a high level of affluence while the majority remain poor and stagnant? Why, in turn, has the number of developing economies set on the track of closing their productivity gap with advanced economies been so limited? One obvious factor underlying this global divergence is unevenness in the ability to adopt and develop advanced technology due in large measure to the difficulty experienced by low income economies in preparing appropriate institutions for borrowing advanced technology given their social and cultural constraints. The major task of this volume is to explore the nature of these binding constraints with the aim of identifying the means to remove them. Comparisons are made with countries where the constraints have been successfully lifted, most notably Japan and East Asian NIEs. This fully revised and updated second edition also incorporates analyses of several recent changes and newly emerged problems relevant to the global economy: the 1997-98 financial crisis in East Asia, the Kyoto Protocol signed in 1997 at the Third Conference of Parties for the United Nations Framework Convention on Climate Change, and the deceleration in growth of agricultural productivity in Asia. Exploration of these issues provides important lessons on how to sustain economic growth based on technology borrowing.
