**II. Short Answer**

1. How do differences in salinity cause deep ocean currents ?

Salinity changes the density of the water.

2. List two processes that cause salinity to increase in bodies of water.

- evaporation
- freezing - sea ice formation

3. What effect does uneven heating of the Earth have on ocean currents?

Uneven heating of the Earth allows bodies of water to have different temperatures. Warm water has a lower density and rises, while cooler water has a higher density and sinks.

4. Global Ocean Currents occur because of what factors?

Very cold temperatures create higher density in water. This combined with an increase in salinity ( salt level ) pushes the deep current along.

5. What are two factors that increase the density of ocean water?

- Temperature
