## **Complexity Hierarchical Structures And Scaling In Physics:**

Complexity R. Badii, 1997 Very successful book in the Cambridge Nonlinear Science Series now available in paperback

*Philosophy of Complex Systems*, 2011-05-23 The domain of nonlinear dynamical systems and its mathematical underpinnings has been developing exponentially for a century the last 35 years seeing an outpouring of new ideas and applications and a concomitant confluence with ideas of complex systems and their applications from irreversible thermodynamics A few examples are in meteorology ecological dynamics and social and economic dynamics These new ideas have profound implications for our understanding and practice in domains involving complexity predictability and determinism equilibrium control planning individuality responsibility and so on Our intention is to draw together in this volume we believe for the first time a comprehensive picture of the manifold philosophically interesting impacts of recent developments in understanding nonlinear systems and the unique aspects of their complexity The book will focus specifically on the philosophical concepts principles judgments and problems distinctly raised by work in the domain of complex nonlinear dynamical systems especially in recent years Comprehensive coverage of all main theories in the philosophy of Complex Systems Clearly written expositions of fundamental ideas and concepts Definitive discussions by leading researchers in the field Summaries of leading edge research in related fields are also included

*Handbook of Decision Making* Goktug Morcol, 2006-11-01 Handbook of Decision Making includes the wisdom of the long theological and philosophical traditions of human society as well as a systematic exploration of the implications of contemporary evolutionary theories Common patterns in decision making styles are identified as well as the common variations that different contexts may generate The text covers the multiplicity of mainstream decision making styles such as cost benefit analysis and linear programming It also explains alternative and emerging methods such as geographic information systems Q methodology and narrative policy analysis Practical applications are discussed using decision making practices in budgeting public administration and governance drug trafficking and information systems

*Fractals, Applied Synergetics and Structure Design* V. S. Ivanova, V. U. Novikov, A. A. Oksogoev, 2005 Non linear systems behaviours are discussed in this book from the point of new scientific approaches to the interdiscipline nature of the fractal geometry and synergetics Fractal analysis synergetics methods and mathematical design are considered according to actual problems of condensed media physics mechanics material science and geology

Concepts and Recent Advances in Generalized Information Measures and Statistics Andres M. Kowalski, Raul D. Rossignoli and Evaldo M. F. Curado, 2013-12-13 Since the introduction of the information measure widely known as Shannon entropy quantifiers based on information theory and concepts such as entropic forms and statistical complexities have proven to be useful in diverse scientific research fields This book contains introductory tutorials suitable for the general reader together with chapters dedicated to the basic concepts of the most frequently employed information measures or quantifiers and their recent applications to different areas including physics

biology medicine economics communication and social sciences As these quantifiers are powerful tools for the study of general time and data series independently of their sources this book will be useful to all those doing research connected with information analysis The tutorials in this volume are written at a broadly accessible level and readers will have the opportunity to acquire the knowledge necessary to use the information theory tools in their field of interest

**Foundations of Celestial Mechanics** Elena Bannikova, Massimo Capaccioli, 2022-12-02 This book provides an introduction to classical celestial mechanics It is based on lectures delivered by the authors over many years at both Padua University MC and V N Karazin Kharkiv National University EB The book aims to provide a mathematical description of the gravitational interaction of celestial bodies The approach to the problem is purely formal It allows the authors to write equations of motion and solve them to the greatest degree possible either exactly or by approximate techniques when there is no other way The results obtained provide predictions that can be compared with the observations Five chapters are supplemented by appendices that review certain mathematical tools deepen some questions so as not to interrupt the logic of the mainframe with heavy technicalities give some examples and provide an overview of special functions useful here as well as in many other fields of physics The authors also present the original investigation of torus potential This book is aimed at senior undergraduate students of physics or astrophysics as well as graduate students undertaking a master s degree or Ph D

**Chaos** Angelo Vulpiani, 2010 Chaos from simple models to complex systems aims to guide science and engineering students through chaos and nonlinear dynamics from classical examples to the most recent fields of research The first part intended for undergraduate and graduate students is a gentle and self contained introduction to the concepts and main tools for the characterization of deterministic chaotic systems with emphasis to statistical approaches The second part can be used as a reference by researchers as it focuses on more advanced topics including the characterization of chaos with tools of information theory and applications encompassing fluid and celestial mechanics chemistry and biology The book is novel in devoting attention to a few topics often overlooked in introductory textbooks and which are usually found only in advanced surveys such as information and algorithmic complexity theory applied to chaos and generalization of Lyapunov exponents to account for spatiotemporal and non infinitesimal perturbations The selection of topics numerous illustrations exercises and proposals for computer experiments make the book ideal for both introductory and advanced courses
