Conceptual Joining Lukas Allner, Christoph Kaltenbrunner, Daniela Kröhnert, Philipp Reinsberg, Institute of Architecture at the University of Applied Arts Vienna, Institute of Art Sciences and Art Education at the University of Applied Arts Vienna, 2021-11-22. This book explores experimental approaches to the design and construction of wooden structures in architecture while presenting the results of an artistic research project. Through the use of digital tools, the anatomy of wood becomes a design-determining principle for spatial structures. The architects and artists also explore the potential of traditional craftsmanship and derive from this a material-oriented practice. Structures are not designed here for a specific use but rather open up various usage possibilities due to their unique spatial and geometric properties. The documentation provides insight into an open-ended research process. Guest contributions reflect on the underlying concepts and thus the future relevance of wood as a building material.

Mass Timber Peggi L. Clouston, Alexander C. Schreyer, 2026-01-14. The most comprehensive reference on building with mass timber, extensively covering its sustainability, materials, building conceptualization, structural design, and construction processes. *Mass Timber: Materials, Design, and Construction* is a one-stop resource book for mass timber construction with thorough textual descriptions, engaging images, many concept drawings, and discussion of state-of-the-art construction practices. The book draws from a large pool of images from the everyday to cutting-edge mass timber construction projects and includes extensive details of recently constructed buildings. Written by a renowned team of experts with over three decades of professional research and teaching experience, *Mass Timber: Materials, Design, and Construction* includes information on sustainability and climate-related benefits of mass timber. Historical applications and products leading up to the current day. Mass timber materials such as cross-laminated timber (CLT), glue-laminated timber (glulam), nail and dowel laminated timber (NLT and DLT), structural composite lumber (PSL and LVL), and the many fastener types used with such materials. Resiliency considerations for wood such as decay, fire, weathering, and its protection during construction. Building conceptualization covering building codes and systems as well as preliminary design considerations. Structural design principles for gravity and lateral loads as well as connection design and detailing. Construction processes covering procurement, scheduling, and lead time estimating, risk management, on-site storage, and hoisting. *Mass Timber: Materials, Design, and Construction* is an excellent classroom or studio companion for students in architecture, engineering, and construction, and a valuable desk reference for any professional in these and related fields.
