Complete Technology And Design:

The Complete Technology Book on Electroplating, Phosphating, Powder Coating And Metal Finishing NIIR Board, 2005-10-04 Electroplating and Metal Finishing concerns itself with the development and applications of composites and non metallic coatings These coatings are used for decorative protective and functional application Some of the other common metal surface finishing technologies are phosphating pickling electroforming powder coating etc Electroplating is the process of applying a metallic coating to an article by passing an electric current through an electrolyte in contact with the article thereby forming a surface having properties or dimensions different from those of the article Metal finishing has now come to be known as surface engineering Surface engineering techniques are generally used to develop a wide range of functional properties In addition to the decorative aspects metal finishing aids the protection of metals and alloys from corrosion and rusting A great potential exists for development of new materials involving for example coatings of metals composites particle incorporated anodic coatings and even films of sapphire like materials porous files of niobium etc and coating of refractory metals like molybdenum and tungsten Phosphate coatings have a wide field of application in manufacturing industry both as an aid to mechanical production operations and in surface finishing The major applications for phosphate treatments fall into four areas pre treatment prior to organic coatings protection against corrosion anti wear coatings and phosphating as a production aid Powder coating of aluminium extrusions in particular has become an important feature in the finishing of aluminium There are several advantages of powder powder coating overspray can be recycled and thus it is possible to achieve nearly 100% use of the coating powder coating production lines produce less hazardous waste than conventional liquid coatings capital equipment and operating costs for a powder line are generally less than for conventional liquid lines Surface finishing is a broad range of industrial processes that alter the surface of a manufactured item to achieve a certain property Currently the trend is towards surface treatments Industries in developing countries like India have to be increasingly aware of the need not only for up gradation of existing technologies but also for indigenization of new technologies on a time bound basis The content of the book includes information about technology involved in surface engineering of metals some of them are electroplating plant barrel planting plant electroplating equipment cleaning pickling and dipping equipment for hot alkaline cleaners electrolytic and chemical processes for the polishing of metals canning stainless steel electro polishing solution electroforming in gramophone record production silver plating fluoborate plating gold plating gilding cadmium plating zinc plating chemical finishing of aluminium powder coating of aluminium bright nickel electro plating copper plating etc This book covers an intensive study of technology of electroplating phosphating powder coating and metal finishing The first hand information on these technologies is dealt in the book and can be very useful for those looking for entrepreneurship opportunity in the said industry TAGS Electroplating Plant Automatic Equipment Surface Coatings and Treatments Electroplating and Coating Plants Electroplating Plant Equipment Powder Coating Plants Powder

machine The mould has its own importance which give the required shapes of the products The vast growth of injection moulding is reflected dramatically in many types and sizes of equipment available today Plastic moulding especially thermoplastic items may be produced by compression moulding methods but since they are soft at the temperature involved it is necessary to cool down the mould before they may be ejected Injection moulding differs from compression moulding is that the plastic material is rendered fluid in a separate chamber or barrel outside the mould is then forced into the mould cavity by external pressure Plastic technology is one of the most vigorous manufacturing branches characterised by new raw materials changing requirements and continuous development in processing methods The injection moulding machines manufacturers plays an important part in the creation of injection moulding technology process control to essential mechanical engineering Even though design is a specialized phase in engineering field in tool and mould engineering it is totally divided into two wings as product design and tool and die design This book basically deals with transport phenomena in polymer films reinforcements for thermosets miscellaneous thermoset processes injection molding blow molding extrusion basic principles of injection moulding correct injection speed is necessary for filling the mould plastic melt should not suffer degradation the mould must be controlled for better quality product logical consideration of moulding profile and material is important than standard setting guide lines economical setting of the machine proper maintenance of machine safety operations preliminary checking for moulding material component mould machine injection moulding technique the various type of injection moulding machines specifications platen mounting of moulds locating spigots mould clamping etc The book covers manufacturing processes of extruded and moulded products with the various mould designs This is very useful book for new entrepreneurs technocrats researchers libraries etc TAGS Plastics Extrusion Plastic Extrusion Machines Plastic Extrusion Process Extrusion Moulding Process Plastic Extrusion Plants Industrial Plastic Extrusion Plastic Extrusion Line Plastic Moulding Plastic Moulding Business Products For Plastic Injection Moulding Plastic Moulding Process Injection Molding Process Plastic Injection Molding Machines Plastic Mould Design Plastics Injection Mould Design Injection Moulding Design Guide Product Design for Plastic Moulding Design for Injection Moulding Preparation of Plasma Films Transport Phenomena in Polymer Films Acrylic Fabrication Reinforcements for Thermosets Miscellaneous Thermoplastic Process Compression and Transfer Molding Disciplined Process Strategy for Injection Moulding Injection Molding Blow Molding Extrusion Newly Developed Injection Moulding Technology Injection Moulding Plastic Injection Moulding Environment in India Tiebarless and 2 Platen Injection Moulding Machines Thin Walled Injection Moulding Mold Cooling Best Bet for High Profits Gas Injectionmoulding Technology Mould Materials and Processing Methods Laminate Composition Reinforcements for Filament Winding Fiberglass Technology Making Glass Fibers Glass Composition Glass Fabric Construction and Weaves Plastisol Molding Injection Molding Machines Injection Unit Mold Clamping Unit Functions of Mold Components Injection Moulding Technique Economical Production of Parts Thermosetting Materials and Elastomers Tiebarless Machine Two Shot
