Based on two conferences held in Trento Italy this volume contains 13 research papers and two survey papers on complex analysis and complex algebraic geometry The main topics addressed by these leading researchers include Mori theory polynomial hull vector bundles q convexity Lie groups and actions on complex spaces hypercomplex structures pseudoconvex domains projective varieties Peer reviewed and extensively referenced Complex Analysis and Geometry contains recent advances and important research results It also details several problems that remain open the resolution of which could further advance the field

An Introduction to Complex Analysis and Geometry John P. D'Angelo, 2010 An Introduction to Complex Analysis and Geometry provides the reader with a deep appreciation of complex analysis and how this subject fits into mathematics The book developed from courses given in the Campus Honors Program at the University of Illinois Urbana Champaign These courses aimed to share with students the way many mathematics and physics problems magically simplify when viewed from the perspective of complex analysis The book begins at an elementary level but also contains advanced material The first four chapters provide an introduction to complex analysis with many elementary and unusual applications Chapters 5 through 7 develop the Cauchy theory and include some striking applications to calculus Chapter 8 glimpses several appealing topics simultaneously unifying the book and opening the door to further study The 280 exercises range from simple computations to difficult problems Their variety makes the book especially attractive A reader of the first four chapters will be able to apply complex numbers in many elementary contexts A reader of the full book will know basic one complex variable theory and will have seen it integrated into mathematics as a whole Research mathematicians will discover several novel perspectives

Analysis and Geometry in Several Complex Variables Gen Komatsu, Masatake Kuranishi, 2012-12-06 This volume consists of a collection of articles for the proceedings of the 40th Taniguchi Symposium Analysis and Geometry in Several Complex Variables held in Katata Japan on June 23-28 1997 Since the inhomogeneous Cauchy Riemann equation was introduced in the study of Complex Analysis of Several Variables there has been strong interaction between Complex Analysis and Real Analysis in particular the theory of Partial Differential Equations Problems in Complex Analysis stimulate the development of the PDE theory which subsequently can be applied to Complex Analysis This interaction involves Differential Geometry for instance via the CR structure modeled on the induced structure on the boundary of a complex manifold Such structures are naturally related to the PDE theory Differential Geometric formalisms are efficiently used in settling problems in Complex Analysis and the results enrich the theory of Differential Geometry This volume focuses on the most recent developments in this interaction including links with other fields such as Algebraic Geometry and Theoretical Physics Written by participants in the Symposium this volume treats various aspects of CR geometry and the Bergman kernel projection together with other major subjects in modern Complex Analysis We hope that

this volume will serve as a resource for all who are interested in the new trends in this area We would like to express our gratitude to the Taniguchi Foundation for generous financial support and hospitality We would also like to thank Professor Kiyosi Ito who coordinated the organization of the symposium

Complex Analysis and CR Geometry Giuseppe Zampieri, 2008 Cauchy Riemann CR geometry is the study of manifolds equipped with a system of CR type equations Compared to the early days when the purpose of CR geometry was to supply tools for the analysis of the existence and regularity of solutions to the bar partial Neumann problem it has rapidly acquired a life of its own and has become an important topic in differential geometry and the study of non linear partial differential equations A full understanding of modern CR geometry requires knowledge of various topics such as real complex differential and symplectic geometry foliation theory the geometric theory of PDE s and microlocal analysis Nowadays the subject of CR geometry is very rich in results and the amount of material required to reach competence is daunting to graduate students who wish to learn it

Complex Analysis and Geometry Filippo Bracci, Jisoo Byun, Hervé Gaussier, Kengo Hirachi, Kang-Tae Kim, Nikolay Shcherbina, 2015-08-05 This volume includes 28 chapters by authors who are leading researchers of the world describing many of the up to date aspects in the field of several complex variables SCV These contributions are based upon their presentations at the 10th Korean Conference on Several Complex Variables KSCV10 held as a satellite conference to the International Congress of Mathematicians ICM 2014 in Seoul Korea SCV has been the term for multidimensional complex analysis one of the central research areas in mathematics Studies over time have revealed a variety of rich intriguing new knowledge in complex analysis and geometry of analytic spaces and holomorphic functions which were hidden in the case of complex dimension one These new theories have significant intersections with algebraic geometry differential geometry partial differential equations dynamics functional analysis and operator theory and sheaves and cohomology as well as the traditional analysis of holomorphic functions in all dimensions This book is suitable for a broad audience of mathematicians at and above the beginning graduate student level Many chapters pose open ended problems for further research and one in particular is devoted to problems for future investigations

Complex Analysis Steven G. Krantz, 2004 In this second edition of a Carus Monograph Classic Steven Krantz develops material on classical non Euclidean geometry He shows how it can be developed in a natural way from the invariant geometry of the complex disc He also introduces the Bergman kernel and metric and provides profound applications some of them never having appeared before in print In general the new edition represents a considerable polishing and re thinking of the original successful volume This is the first and only book to describe the context the background the details and the applications of Ahlfors s celebrated ideas about curvature the

Schwarz lemma and applications in complex analysis Beginning from scratch and requiring only a minimal background in complex variable theory this book takes the reader up to ideas that are currently active areas of study Such areas include a the Caratheodory and Kobayashi metrics b the Bergman kernel and metric c boundary continuation of conformal maps There is also an introduction to the theory of several complex variables Poincar s celebrated theorem about the biholomorphic inequivalence of the ball and polydisc is discussed and proved

Geometric Function Theory Tom Carroll,2024-12-11 This textbook provides a second course in complex analysis with a focus on geometric aspects It covers topics such as the spherical geometry of the extended complex plane the hyperbolic geometry of the Poincar disk conformal mappings the Riemann Mapping Theorem and uniformisation of planar domains characterisations of simply connected domains the convergence of Riemann maps in terms of Carath odory convergence of the image domains normal families and Picard s theorems on value distribution as well as the fundamentals of univalent function theory Throughout the text the synergy between analysis and geometry is emphasised with proofs chosen for their directness The textbook is self contained requiring only a first undergraduate course in complex analysis The minimal topology needed is introduced as necessary While primarily aimed at upper level undergraduates the book also serves as a concise reference for graduates working in complex analysis

Complex Analysis and Algebraic Geometry Hans Grauert,2006-11-14 *Complex Analysis and Geometry* Pierre Dolbeault,A. Iordan,G. Henkin,H. Skoda,J.-M. Trepreau,2012-12-06 This meeting has been motivated by two events the 85th birthday of Pierre Lelong and the end of the third year of the European network Complex analysis and analytic geometry from the programme Human Capital and Mobility For the first event Mathematicians from Poland Sweden United States and France whose work is particularly related to the one ofP Lelong have accepted to participate for the second the different teams of the Network sent lecturers to report on their most recent works These teams are from Grenoble Wuppertal Berlin Pisa and Paris VI in fact most of their results are also related to Lelong s work and a posteriori it is difficult to decide whether a talk is motivated by the first or by the second event We chose only plenary lectures usually of one hour except a small number given by young mathematicians which have been shorter A two hours problem session has been organized The Proceedings gather papers which are exact texts of the talks or are closely related to them The members from the Network and five other lecturers sent us papers the other lecturers published the content of their talks in mathematical Journals All the presented texts have been submitted to referees independent of the organizing committee the texts of the problems have been approved by their authors

Complex Analysis and algebraic geometry Thomas Peternell, Frank-Olaf Schreyer,1977 Complex Analysis and Geometry Jeffery D. McNeal,2017-04-24 This volume is the proceedings of a conference held at Ohio State University in May of 1999 Over sixty mathematicians from around the world participated in this conference and principal lectures were given by some of the most distinguished experts in the field The proceedings volume contains fully refereed research articles from some of the principal speakers including Salah Baouendi UCSD David Barrett Univ Michigan Bo Berndtsson Goteborg David Catlin Purdue Univ Micheal Christ Berkeley John D Angelo Univ Illinois Xiaojun Huang Rutgers J J Kohn Princeton Y T Siu Harvard and Emil Straube Texas A M Complex Analysis in One Variable and Riemann Surfaces Mei-Chi Shaw, Charles M. Stanton,2026-01-01 This textbook is intended for an introductory course in the theory of complex analysis and Riemann surfaces A special feature includes the systematic treatment of complex analysis from the point of view of partial differential equations The main goal is to study complex analysis in one variable using modern mathematics with emphasis on its deep connections to other branches of mathematics especially on the tremendous development of partial differential equations in the twentieth century The book can also be used as a reference for students and researchers interested in modern concepts

and techniques in one and several complex variables algebraic and complex geometry partial differential equations and geometric analysis The book is reasonably self contained with much background material given in the appendices Many examples and exercises are provided The text is based on lecture notes taught by the first author over the years at the University of Notre Dame to widely varied audiences including students in mathematics physics engineering and other sciences By taking advantage of the development of Hilbert space methods in partial differential equations this textbook provides a much needed update on complex function theory and Riemann surfaces In the first five chapters the authors introduce some background material in complex analysis in one variable using only multivariable calculus This includes the Cauchy integral formula with its applications the Riemann mapping theorem and the theorems of Weierstrass and Mittag Leffler Starting from Chapter 6 a comprehensive study of the roles that partial differential equations play in complex analysis is presented systematically with focus on the Cauchy Riemann equation and the Laplacian A thorough treatment of the Laplace and Poisson equations with both classical and Hilbert space approaches is given and applied to obtain function theory on Riemann surfaces The book also introduces several complex variables and bridges the gap between one and several complex variables

Geometry and Complex Variables S. Coen, 2017-11-22 This reference presents the proceedings of an international meeting on the occasion of the University of Bologna's ninth centennial highlighting the latest developments in the field of geometry and complex variables and new results in the areas of algebraic geometry differential geometry and analytic functions of one or several complex variables Building upon the rich tradition of the University of Bologna's great mathematics teachers this volume contains new studies on the history of mathematics including the algebraic geometry work of F Enriques B Levi and B Segre complex function theory ideas of L Fantappie B Levi S Pincherle and G Vitali series theory and logarithm theory contributions of P Mengoli and S Pincherle and much more Additionally the book lists all the University of Bologna's mathematics professors from 1860 to 1940 with precise indications of each course year by year Including survey papers on combinatorics complex analysis and complex algebraic geometry inspired by Bologna's mathematicians and current advances *Geometry and Complex Variables* illustrates the classic works and ideas in the field and their influence on today's research

Several Complex Variables with Connections to Algebraic Geometry and Lie Groups Joseph L. Taylor, 2002 This text presents an integrated development of core material from several complex variables and complex algebraic geometry leading to proofs of Serre's celebrated GAGA theorems relating the two subjects and including applications to the representation theory of complex semisimple Lie groups It includes a thorough treatment of the local theory using the tools of commutative algebra an extensive development of sheaf theory and the theory of coherent analytic and algebraic sheaves proofs of the main vanishing theorems for these categories of sheaves and a complete proof of the finite dimensionality of the cohomology of coherent sheaves on compact varieties The vanishing theorems have a wide variety of applications and these are covered in detail Of particular interest are the last three chapters which are devoted to

applications of the preceding material to the study of the structure theory and representation theory of complex semisimple Lie groups. Included are introductions to harmonic analysis, the Peter-Weyl theorem, Lie theory and the structure of Lie algebras, semisimple Lie algebras and their representations, algebraic groups and the structure of complex semisimple Lie groups. All of this culminates in Milicic's proof of the Borel-Weil-Bott theorem, which makes extensive use of the material developed earlier in the text. There are numerous examples and exercises in each chapter. This modern treatment of a classic point of view would be an excellent text for a graduate course on several complex variables as well as a useful reference for the expert.
