When multiple forces act on an object, they combine to produce a net force, which determines whether the object speeds up, slows down, or changes direction. Understanding how forces act together is essential to explaining various observations from a physics world, such as a ball's trajectory or a car's acceleration.</p> <p>Newton's second law of motion states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force increases, the acceleration increases proportionally, and if the mass increases, the acceleration decreases. This relationship is a key principle in understanding motion.</p> <p>Forces also interact to determine the stability of an object. For example, a book sitting on a table is held in place by the normal force of the table and the force of gravity. If these forces are not balanced, the book will fall. Similarly, a car's suspension system is designed to absorb bumps and maintain a smooth ride by balancing the forces of gravity and the road's surface.</p> </div> <p>Answer the questions below for each question.</p> <ol style="list-style-type: none"> Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force <div style="text-align: right;">  </div>
