Before Installing Your Cable Modem

Your cable service provider needs to know your modem's **MAC ADDRESS**, which is printed on a label on the bottom of your modem. You can provide this when you order cable modem service or if you already installed one by calling the cable company (SOHO) installing your modem. You may also be asked for your cable modem's model name and number, which is **DOCSIS 2.0**. If you have the modem's **serial number**, you can find it over the MAC address on the modem's label.

System Requirements

- The need for Internet/Ethernet cable modem service that uses one of the popular DOCSIS standards - 1.0, 1.1, or 2.0. If you need to get cable modem service, please speak with your cable service provider.
- To use this Quick Start, you need a computer, an iPad® or another tablet.

If your cable service provider provided a cable modem starter kit, please continue below. If you don't have or choose not to use the cable modem starter kit from your service provider, go to **How to connect to a computer if you don't have or choose not to use a cable modem starter kit**.

If your cable service provider provided a cable modem starter kit

Some cable service providers supply a cable modem starter kit that can be useful when you install your cable modem. The kit may include a coaxial cable for connecting between a wall jack and your cable modem. (There are also available at most electronics retailers.) The kit can include instructions, and may also include a CD with software. If you received a kit like this, we recommend that you read the kit's instructions and use them to install your Cable cable modem/router. The modem is DOCSIS 2.0 certified by CableLabs, and connects like a normal cable modem.

You will need to plug in the modem's power cord, connect its cable modem service using a coaxial cable, and then connect to a computer using either the included CD and/or one of the sections below (see **Using the Cable Modem/Router to Make a Wireless Connection**).

Note: Please refer to the **Hardware Connection** section if you would like to see a diagram of the back of the cable modem and a description of the connections.

After you have installed your cable modem and it has synchronized itself with the cable network, your cable modem can connect your computer to the Internet.

Note: Allow 2 to 10 minutes to power up the first time because the cable modem/router must locate and connect to the appropriate channels for communication. You'll see the **CM**, **5G**, and/or **Online** modem lights flashing until the Online light stops blinking green to signal success.

Now open your browser and go to a familiar Web site to check that the cable modem is working.

- If you want to connect the modem/router wirelessly to some devices, see **Connecting the Cable Modem/Router Wirelessly to Some Device**.
- If you want to connect additional computers/devices using the modem/router's Ethernet LAN ports, please see **Read This Only if You Are Connecting Additional Computers and/or Other Devices to the Cable Modem/Router's Ethernet ports**.
- If you want to configure advanced options, please refer to the User Manual on the CD.

How to connect to a computer if you don't have or choose not to use a cable modem starter kit

1. Be sure your computer is on and the cable modem is unplugged.
   Note: Please refer to the **Hardware Connection** section if you would like to see a diagram of the back of the cable modem and a description of the connections, or you can read the following steps.

   - Alternatively, there may already be a coaxial cable that is connected to service and that has an open end for connecting to the cable modem.
3. Plug the power cord into the **AC IN** connector on the rear panel of the cable modem and into the electrical outlet. This turns the cable modem on. Check that the **Power** LED lights up.

If you want to connect your computer wirelessly instead, see **Connecting the Cable Modem/Router Wirelessly to Some Device**.

   Note: Allow 2 to 10 minutes to power up the first time because the cable modem must locate and connect to the appropriate channels for communication. You'll see the **CM**, **5G**, and/or **Online** modem lights flashing until the Online light stops blinking green to signal success.

Placement Guidelines

For more computers and/or devices that support WPS, see **Using WPS to set up your wireless network**. (Windows 7 XP / Service Pack 3) or the latest versions of Windows Vista (Service Pack 2) support WPS. For those computers and/or devices that do support WPS/WPA2 but that don't support WPS, write the default SSID and Pre-Shared Key below in the wireless network section of the device's configuration menus.

Note: Typically, network devices that don't support WPS but do support WPA/WPA2.

If the utility asks if you want to turn on file and printer sharing, please refer to the User Manual on the CD for instructions on how to configure your network.

Using WPS to set up your wireless network

If all the Wi-Fi compatible wireless devices on your network support WPS:

2. Within 2 minutes (before the WPS LED light turns off), press the WPS button on the device that you're linking wirelessly to the modem/router. The button may be a physical pushbutton on the device or a button on a page of the device's wireless network configuration menus.
3. **Congratulations!** You should now have a secure connection between the router and a device. Now is a good time to check that your device's Internet connection is working. Open your browser and go to a familiar Web site. If you are unable to connect, continue with the next step below.
   If you are not able to connect to the Internet, go to **Troubleshooting Tips**.
4. If you have other devices whose WPS security you want to set, repeat steps 1 through 3 for each device. When they are all set, go to step 5.
