en mathématiques la cohomologie galoisienne est l'étude de l'action d'un groupe de galois sur certains groupes par des méthodes cohomologiques elle permet d'obtenir des résultats à la fois sur le groupe de galois agissant et sur le groupe sur lequel il agit en particulier le groupe de galois d'une extension de corps de nombres  $L/k$  agit naturellement par exemple sur le groupe multiplicatif  $L^\times$  mais aussi sur le groupe des unités de l'anneau des entiers du corps  $L$  ou sur son

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group  $G$  associated to a field extension  $L/k$  acts in a natural way on some abelian groups for example those constructed directly from  $L$  but also through other galois representations that may be derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
