

World's Largest Cities By Population

What is the world's largest city? Answers to that question will vary greatly depending on which boundaries are being used to measure population. Below are the rankings of top cities based on the three most common measurements.

City proper

This defines a city's population based on its administrative boundaries. Of course, the size of a municipality's boundaries can vary greatly. On one extreme, Miami's city population is just 470,000 people. On the other, the Chinese city of Chongqing has an administrative boundary the size of Austria.

modern approaches including new and previously unpublished results by the authors illustrated with examples from bird and

methods for estimating them from field data The long run growth rate of a population is explained and extended to include
age structure with both demographic and environmental stochasticity Diffusion approximations facilitate the analysis of
