Wang,2019-11-20 This report was jointly launched by the National Academy of Economic Strategy of the Chinese Academy of Social Sciences and UN HABITAT Using the indicator system and objective data the competitiveness of 1 035 global cities was evaluated in detail The report measures the development pattern of global urban competitiveness as a whole and the gap between the relevant parties and the ideal state It has refreshed people s past perceptions of urban rankings and confirmed that the science and technology innovation center cities and central cities of emerging economies have begun to break the inherent global cities and they have entered the ranks of the most urban competitiveness While paying attention to the comparison of competitiveness among cities this report further promotes the perspective to the pattern and trend change of global economic and social development from the perspective of city The followings are new findings First information technology has increasingly become the primary driving force for urban development Second it is the three meridians that divide the global urban population and economic differentiation Third the soft links between cities gradually dominate the global urban system Fourth the formation of new global cities is beginning **The Rise of Cities in North-West Europe**

Musterd,Ronald Van Kempen,1998-09 **Continuity And Change In Rural Russia A Geographical Perspective** Gregory Ioffe,Tatyana Nefedova,2018-02-23 Contrary to the viewpoint of many Western scholars the authors of this penetrating analysis argue that private farming is not a viable option in Russia s future Instead a convergence of Soviet style subsidiary farming with traditional and reorganized collective farms is the most plausible path of evolution in most rural areas Grigory Ioffe and Tatyana Nefedova arrive at this conclusion by a careful examination of ongoing reform efforts in Russian agriculture against the backdrop of European and Russian agrarian history and rural spatial development since the late nineteenth century The comparisons at the national level are then filled in with consideration of a number of Russian provinces oblasti and regions raiony Their research reveals the substantial negative impact of rural depopulation on the Russian agrarian economy Seventy original maps richly complement and support the narrative **Shrinking Cities** Karina Pallagst,Thorsten Wiechmann,Cristina Martinez-Fernandez,2013-08-15 The shrinking city phenomenon is a multidimensional process that affects cities parts of cities or metropolitan areas around the world that have experienced dramatic decline in their economic and social bases Shrinkage is not a new phenomenon in the study of cities However shrinking cities lack the precision of systemic analysis where other factors now at work are analyzed the new economy globalization aging population a new population transition and other factors related to the search for quality of life or a safer environment This volume places shrinking cities in a global perspective setting the context for in depth case studies of cities within Mexico Brazil Indonesia Germany France Great Britain South Korea Australia and the USA which consider specific economic social environmental cultural and land use issues Eastern Europe to the French Revolution.
