Phenomenology and Intercultural Understanding Kwok-Ying Lau, 2016-09-29 This book approaches the topic of intercultural understanding in philosophy from a phenomenological perspective. It provides a bridge between Western and Eastern philosophy through in-depth discussion of concepts and doctrines of phenomenology and ancient and contemporary Chinese philosophy. Phenomenological readings of Daoist and Buddhist philosophies are provided; the reader will find a study of theoretical and methodological issues and innovative readings of traditional Chinese and Indian philosophies from the phenomenological perspective. The author uses a descriptive rigor to avoid cultural prejudices and provides a non-Eurocentric conception and practice of philosophy. Through this East-West comparative study, a compelling criticism of a Eurocentric conception of philosophy emerges. New concepts and methods in intercultural philosophy are proposed through these chapters. Researchers, teachers, post-graduates, and students of philosophy will all find this work intriguing, and those with an interest in non-Western philosophy or phenomenology will find it particularly engaging. **Economic**

Transformations Richard G. Lipsey, Kenneth I. Carlaw, Clifford T. Bekar, 2005-11-03 This book examines the long-term economic growth that has raised the West's material living standards to levels undreamed of by counterparts in any previous time or place. The authors argue that this growth has been driven by technological revolutions that have periodically transformed the West's economic, social, and political landscape over the last 10,000 years and allowed the West to become, until recently, the world's only dominant technological force. Unique in the diversity of the analytical techniques used, the book begins with a discussion of the causes and consequences of economic growth and technological change. The authors argue that long-term economic growth is largely driven by pervasive technologies now known as General Purpose Technologies (GPTs). They establish an alternative to the standard growth models that use an aggregate production function and then introduce the concept of GPTs, complete with a study of how these technologies have transformed the West since the Neolithic Agricultural Revolution. Early modern science is given more importance than in most other treatments, and the 19th-century demographic revolution is studied with a combination of formal models of population dynamics and historical analysis. The authors argue that once sustained growth was established in the West, formal models can shed much light on its subsequent behaviour. They build non-conventional dynamic, non-stationary equilibrium models of GPT-driven growth that incorporate a range of phenomena that their historical studies show to be important but which are excluded from other GPT models in the interests of analytical tractability. The book concludes with a study of the policy implications that follow from their unique approach.

The Emergence of Modern Europe Kelly Roscoe, 2017-07-15 The sixteenth century in Europe was a period of vigorous economic expansion that led to social, political, religious, and cultural transformations and established the early modern age. This resource explores the emergence of monarchial nation-states and early Western capitalism during this period. Also examined in depth are the Protestant Reformation and the Counter-Reformation, which exacerbated tensions between states.
