Industrial Applications of Glycoside Hydrolases Smriti Shrivastava, 2020-10-03 This book gathers selected studies on the industrial applications of glycoside hydrolases GHs presenting an updated classification of these enzymes and discussing their structure mechanisms and various approaches to improve their catalytic efficiency Further it explains the various industrial applications of glycoside hydrolases in food effluent treatment biofuel production and the paper and pulp industries Lastly the book provides a comparative analysis of glycoside hydrolases and discusses the role of metagenomics in the discovery of industrially important enzymes As such it is a thought provoking instructive and informative resource for biochemists enzymologists molecular biologists and bioprocess technologists *Bioprocessing Technologies in Biorefinery for Sustainable Production of Fuels, Chemicals, and Polymers* Shang-Tian Yang, Hesham El-Ensashy, Nuttha Thongchul, 2013-05-24 Sets the stage for large scale production of biofuels and bio based chemicals In response to diminishing supplies as well as the environmental hazards posed by fossil fuels and petrochemicals interest and demand for green sustainable biofuels and bio based chemicals are soaring Biomass may be the solution It is an abundant carbon neutral renewable feedstock that can be used for the production of fuels and chemicals Currently biorefineries use corn soybeans and sugarcane for bioethanol and biodiesel production however there are many challenges facing biorefineries preventing biomass from reaching its full potential This book provides a comprehensive review of bioprocessing technologies that use lignocellulosic biomass for the production of biofuels biochemicals and biopolymers It begins with an overview of integrated biorefineries Next it covers Biomass feedstocks including sugar starch oil and energy crops as well as microalgae Pretreatment technologies for lignocellulosic biomass Hydrolytic enzymes used in biorefineries for the hydrolysis of starch and lignocelluloses Bioconversion technologies for current and future biofuels such as ethanol biodiesel butanol hydrogen and biogas Specialty chemicals building block chemicals and biopolymers produced via fermentation Phytochemicals and functional food ingredients extracted from plant materials All the chapters have been written and edited by leading experts in bioprocessing and biorefining technologies Contributions are based on a thorough review of the literature as well as the authors firsthand experience developing and working with bioprocessing technologies By setting forth the current state of the technology and pointing to promising new directions in research *Bioprocessing Technologies in Biorefinery for Sustainable Production of Fuels Chemicals and Polymers* will enable readers to move towards large scale sustainable and economical production of biofuels and bio based chemicals *Industrial Enzymes* Julio Polaina, Andrew P. MacCabe, 2007-05-16 Man s use of enzymes dates back to the earliest times of civilization Important human activities such as the production of certain types of foods and beverages and the tanning of hides and skins to produce leather for garments serendipitously took advantage of enzyme activities Important advances in our understanding of the nature of enzymes and their action were made in the late 19th and early 20th centuries seeding the explosive expansion from the 1950s and 60s

onward to the present billion dollar enzyme industry Recent developments in the fields of genetic engineering and protein chemistry are bringing ever more powerful means of analysis to bear on the study of enzyme structure and function that will undoubtedly lead to the rational modification of enzymes to match specific requirements as well as the design of new enzymes with novel properties This volume reviews the most important types of industrial enzymes covering in a balanced manner three interrelated aspects of paramount importance for enzyme performance three dimensional protein structure physicochemical and catalytic properties and the range of both classical and novel applications The material covered will be of interest to undergraduate and graduate students in biochemistry biotechnology and applied microbiology in addition to researchers and industrialists

Handbook of Starch Science and Technology Ming Miao,Long Chen,James N. BeMiller,2025-04-01

Fifteen years have passed since the last major treatise on starch was published Since then knowledge of the molecular and macromolecular structures of starch exploration of new sources of commercial starch modification of the properties of starches via chemical enzymic genetic and physical means and investigations into potential uses of new products have proliferated The Handbook of Starch Science and Technology explores new developments in starch science and technologies to achieve new paradigms in the development of natural glucose polymers New developments of starches with enhanced nutritional and health benefits and specialized starch derivatives are discussed in terms of novel applications for the design of functional products and recent developments for structuring starch that have not been covered in the previous literature Further it discusses the uses of starch in the manufacture of starch inclusion complexes and nanoparticles and as a key component in carrier delivery applications Features Explores the genetics and physiology of starch biosynthesis Covers the source isolation structure and properties of starches Identifies the structure and behavior of typical components in starch amylose amylopectin and phytoglycogen Includes specific information on the modification and application of starch derivatives Presents current and emerging trends for starch science and technology This timely guide is for scientists and technologists working in the fields of agriculture biotechnology food pharmaceuticals chemical engineering nutrition and human health
