British Agriculture Since 1945

JA Banks

British Agriculture Since 1945:

British Agriculture Since 1945 B. A. Holderness, 1985 Kent in the Twentieth Century Nigel Yates, 2001 This is the sixth volume to be published in the major ten volume new history of the county of Kent and the first detailed study of the development of Kent during the past hundred years The sixth volume to be published in the major ten volume new history of the county of Kent and the first detailed study of the development of Kent over the past hundred years Each of the ten chapters begins by evoking a picture of Kent on the eve of the First World War and looking at the changes that have taken place between then and the present day in the area under discussion Particular attention is paid to the impact of the two World Wars on Kent to the influence of national events on local institutions and people to the role of the county council in the development of many aspects of life in Kent and to the major economic and social changes of the last thirty years many of them associated with Britain's entry into the European economic community and Kent's strategic importance as a corridor linking London and Britain to Europe NIGEL YATES is senior research fellow in church history University of Wales Lampeter

Histories of Technology, the Environment and Modern Britain Jon Agar, Jacob Ward, 2018-04-09 Histories of Technology the Environment and Modern Britain brings together historians with a wide range of interests to take a uniquely wide lens view of how technology and the environment have been intimately and irreversibly entangled in Britain over the last 300 years It combines for the first time two perspectives with much to say about Britain since the industrial revolution the history of technology and environmental history Technologies are modified environments just as nature is to varying extents engineered Furthermore technologies and our living and non living environment are both predominant material forms of organisation and self organisation that surround and make us Both have changed over time in intersecting ways Technologies discussed in the collection include bulldozers submarine cables automobiles flood barriers medical devices museum displays and biotechnologies Environments investigated include bogs cities farms places of natural beauty and pollution land and sea The book explores this diversity but also offers an integrated framework for understanding these intersections *The Farmer in England, 1650-1980* Richard W. Hoyle, 2016-03-03 Farmers held a pivotal role in the capitalist agriculture that emerged in England in the eighteenth century yet they have attracted little attention from rural historians Farmers made agriculture happen They brought together the capital and the technical and management skills which allowed food to be produced It was they and not landowners who employed and supervised labour They accepted the risk inherent in agriculture paying largely fixed rents out of fluctuating and uncertain incomes They are the rural equivalent of the small businessman with his own firm employing people and producing for markets sometimes distant ones Our ignorance of the farmer might be justified by the claim that they are ill documented but in fact farmers were normally literate and kept records day books journals accounts This volume goes some way to counter the claim that a history of the farmer cannot be written by showing the range of materials available and the diversity of approaches which can be employed to study the activities and actions of

individual farmers from the sixteenth century onwards Farm records offer invaluable insights into the farming economy which are available nowhere else In this volume accounts are used in a variety of ways as the means to access single farms but also in gross as a national sample of accounts to reveal regional variation over time For the later nineteenth and twentieth centuries the range of sources available increases enormously and farmers indeed farmer s wives too emerge as articulate commentators on their own position using correspondence to outline their difficulties in the First World War Some even developed second careers as newspaper columnists and journalists This book focuses attention back on the farmer and it is hoped will help to restore farmers to their rightful position in history as rural entrepreneurs

The Failure of Land Reform in Twentieth-Century England Michael Tichelar,2018-07-17 Based on a mixture of primary historical research and secondary sources this book explores the reasons for the failure of the state in England during the twentieth century to regulate tax and control the market in land for the common or public good It is maintained that this created the circumstances in which private property relationships had triumphed by the end of the century Explaining a complex field of legislation and policy in accessible terms the book concludes by asking what type of land reform might be relevant in the twenty first century to address the current housing crisis which seen in its widest context has become the new land question of the modern era

Geopolitics and the Green Revolution John H. Perkins,1997-12-14 During the last 100 years the worldwide yields of cereal grains such as wheat and rice have increased dramatically Since the 1950s developments in plant breeding science have been heralded as a Green Revolution in modern agriculture But what factors have enabled and promoted these technical changes And what are the implications for the future of agriculture This new book uses a framework of political ecology and environmental history to explore the Green Revolution s emergence during the 20th century in the United States Mexico India and Britain It argues that the national security planning efforts of each nation were the most important forces promoting the development and spread of the Green Revolution when viewed in the larger scheme this period can be seen as the latest chapter in the long history of wheat use among humans which dates back to the neolithic revolution Efforts to reform agriculture and mitigate some of the harsh environmental and social consequences of the Green Revolution have generally been insensitive to the deeply embedded nature of high yielding agriculture in human ecology and political affairs This important insight challenges those involved in agriculture reform to make productivity both sustainable and adequate for a growing human population

International Bibliography of Business History Francis Goodall,Terry Gourvish,Steven Tolliday,2013-12-16 The field of business history has changed and grown dramatically over the last few years There is less interest in the traditional company centred approach and more concern about the wider business context With the growth of multi national corporations in the 1980s international and inter firm comparisons have gained in importance In addition there has been a move towards improving links with mainstream economic financial and social history through techniques and outlook The International Bibliography of Business History brings all of the strands together and

provides the user with a comprehensive guide to the literature in the field The Bibliography is a unique volume which covers the depth and breadth of research in business history This exhaustive volume has been compiled by a team of subject specialists from around the world under the editorship of three prestigious business historians

Land and Society in England 1750-1980 G. E. Mingay,1994 Looks at the changing use of land in England *Science and Technology in the United Kingdom* Sir Robin Nicholson,Catherine M. Cunningham,Philip Gummett,1991 **Economic History of England** Milton Briggs,Percy Jordan,1957 **British Documents on Foreign Affairs: Austria, Belgium and Luxembourg, Denmark, Iceland, the Netherlands, Norway, Sweden and Switzerland, 1952** ,2006 **Twentieth Century Lincolnshire** Dennis R. Mills,1989 **The Politics of Agricultural Support in Britain** Martin John Smith,1990 **The Origins of the Organic Movement** Philip Conford,2001 With recent media hysteria and public concern about BSE and genetically modified crops we could be forgiven for thinking that the upsurge of interest in organic farming is a reflection of modern debate and a vindication of what left wing alternative groups have been advocating for years However in this first and authoritative history of twentieth century green culture Philip Conford reveals that the early exponents of the organic movement actually belonged more to extreme right wing conservative groups which were reacting to industrialization and the increasing threat to traditional country life closely associated with socialist politics Drawing on a wealth of contemporary sources Conford chronicles the origins of the organic movement in Britain and America between the 1920s and 1960s and offers a perceptive portrayal of an organization which believes implicitly in the positive acceptance of the natural order and its laws The author demonstrates convincingly that organic farming is not a recent issue and traces the evolution of this now thriving movement With the recent EU directive banning animal products in animal feed together with the public backlash against genetically modified crops this book provides powerful reinforcement to a debate that has raged for over a century and which affects us all

A History of Modern Britain Herbert L. Peacock,1980 World Agricultural Economics and Rural Sociology Abstracts ,1990 Farmworkers Alan Armstrong,1988 This book seeks to distil the experience of some 5 million people over two centuries in four contexts the home and the workplace the local community and the wider social environment in order to produce a picture of farming life as experienced by individual workers and their families

Harvests of Change Nicholas Goddard,1988 *Nutrition Abstracts and Reviews* ,1978 British Speeches of the Day British Information Services,
