British Secret Projects Jet Fighters Since 1950:

British Secret Projects Tony Buttler, 2017 **British Secret Projects 1: Jet Fighters Since 1950** Tony Buttler, 2017-01-05 The original version of this book described the development work from the end of WWII to build the new generation of British jet fighters in doing so it lifted the lid on many projects and dead ends which had never been publically discussed This was the book that launched the hugely successful Secret Projects series and the writing career of renowned historian and author Tony Buttler This completely revised and redesigned second edition takes the original primary source material and adds to it new material that has come to life in the decades since the original edition was published Particular emphasis is placed on the tender design competitions and the decisions at the Air Ministry to reject many promising projects yet allow others to be built and flown Aircraft types covered include the Hawker P 1103 P 1116 P 1121 series the extraordinary jet and rocket mixed power plant interceptors from Saunders Roe the equally impressive Fairey Delta III and the origins of today's Hawk and Eurofighter The book includes appendices that list all the British fighter projects and specifications for this period There are also a number of specially commissioned color renditions of might have been types in contemporary markings plus photographs and general arrangement 3 view drawings over 400 illustrations in total The result is a unique insight into the secret world of British jet fighter projects through the golden years of the British aerospace industry while also presenting a coherent picture of British fighter development and evolution *British Secret Projects 3* Tony Buttler, 2004 8 1 2 x 11 180 b w photos This title completes a trilogy covering the design and development of British fighters and bombers from the end of the biplane era to the present day This new volume again emphasizes the designs that were never flown It covers aircraft projects that were prepared from the mid 1930s onwards and that were influenced by the growing threat of another war with Germany through to some projects which appeared after the war was over The latter includes early jets such as the Attacker Sea Hawk and Venom which all flew post war but were designed to wartime or immediate post war requirements Among the designs featured in this book are fixed gun fighters turret fighters twin engine cannon fighters light medium and heavy bombers torpedo bombers and flying boats As in the trilogy's first two volumes these designs are covered with detailed descriptions and data and numerous photographs of models or artists' impressions showing how these designs would have looked Unlike the post war years details of many earlier unbuilt projects have been lost but fortunately information on a great number of these has survived and this will form the most complete record to be published on these fascinating machines *British Secret Projects 2* Tony Buttler, 2018 Like fighters many bomber projects were drawn by British aircraft manufacturing companies in times of potential or actual combat While names such as Canberra Vulcan Victor TSR2 Harrier and Tornado are known to many as they made it into the skies the fact that so many other projects from different companies remained on the drawing board provides a rich diversity of might have been aircraft designs ripe for coverage As with *British Secret Projects 1 Jet Fighters Since 1950* the author has researched extensively

with particular emphasis on the design and development work that took place within various tender design competitions. Many little known projects are included that help to illustrate how British bomber development changed against a backdrop of political upheaval, shrinking defense expenditure and technological advancement including supersonic flight, nuclear weapons and VTOL. The story which starts with Britain's quest for a jet powered Mosquito replacement and concludes with reference to the next leap forward FOAS, an unarmed bomber flown by pilots on the ground. Accompanied by detailed appendices of all British post war bomber projects and specifications, color photographs and artwork. *British Secret Projects 2: Jet Bombers Since 1949* provides a wealth of detailed information on the fascinating world of Cold War secret bomber projects. *British Secret Projects* Tony Buttler, 2003. The design and development of British bombers since WWII is covered in depth. Utilizes recently declassified archives to reveal little known facts about special bomber development projects. Covers the design backgrounds for the V Bomber program, Canberra, Buccaneer, Avro 730, TSR 2, Harrier, Jaguar and Tornado. Contains many previously unpublished illustrations plus specially commissioned artworks of prototypes in contemporary markings. *Fighters Over the Fleet* Norman Friedman, 2016-10-30. A tactical and technical history of the development of British, American and Japanese naval air defense from the 1920s to the 1980s. This is an account of the evolution of naval fighters for fleet air defense and the parallel evolution of the ships operating and controlling them, concentrating on the three main exponents of carrier warfare: the British Royal Navy, the U.S. Navy and the Imperial Japanese Navy. It describes the earliest efforts from the 1920s but it was not until radar allowed the direction of fighters that organized air defense became possible. Thus major naval air battles of the Second World War like Midway, the Pedestal convoy, the Philippine Sea and Okinawa are portrayed as tests of the new technology. This was ultimately found wanting by the Kamikaze campaigns leading to postwar moves towards computer control and new kinds of fighters. After 1945 the threats of nuclear weapons and standoff missiles compounded the difficulties of naval air defense. The second half of the book covers R.N. and U.S.N. attempts to solve these problems, looking at the American experience in Vietnam and British operations in the Falklands War. It concludes with the ultimate U.S. development of techniques and technology to fight the Outer Air Battle in the 1980s which in turn point to the current state of carrier fighters and the supporting technology. Based largely on documentary sources, some previously unused, this book will appeal to both the naval and aviation communities. *Fighters Over the Fleet* provides more information about fleet air defense than any other work currently available. It is recommended for specialist as well as aviation minded readers. Naval Historical Foundation. *Spyhunter* Michael Shrimpton LLB, 2025-08-29. *Spyhunter* is the only published history of the *Deutschverteidigungsdienst* DVD, the covert agency set up by Admiral Wilhelm Canaris in 1943 after German defeats in the Battles of the Atlantic and the Kursk Salient. Canaris and the Gestapo chief Muller faked their deaths in 1945. The world's most powerful intelligence agency, the DVD went on to control the UN, assassinate President Kennedy and install its man Saddam Hussein in Iraq. Part 1 explains how Michael came to be involved at a high level in the

secretive world of intelligence Part 2 is a history of German intelligence prior to 1945 including the shutdown and murder of Amelia Earhart and Part 3 covers the DVD itself The book probably features in the libraries of most intelligence agencies The postwar world cannot be explained without understanding the DVD **Cold War Delta Prototypes** Tony

Buttler,2020-12-24 The fascinating history of how the radical delta wing became the design of choice for early British and American high performance jets and of the role legendary aircraft like the Fairey Delta series played in its development At the dawn of the supersonic jet age aircraft designers were forced to devise radical new planforms that suited the new power of the jet engine One of the most successful was the delta wing Although Gloster produced the delta wing Javelin and Boulton Paul its P 111 research aircraft Fairey and Avro were the champions of the delta in Britain Meanwhile in America with the exception of Douglas s Navy jet fighter programmes Convair largely had the delta wing to itself These development lines one on each side of the Atlantic had essentially the same objective to produce high speed fighter aircraft In Britain the Fairey Delta 2 went on to break the World Air Speed Record in spectacular fashion but it failed to win a production order In contrast Convair received major orders for two jet fighter types and one jet bomber At the same time the British Avro company built the 707 family of research aircraft which led to the famous Vulcan to show how the delta wing could be adopted for a highly successful subsonic bomber This book examines the development of the delta wing in Britain and America and the way in which experimental aircraft like the Fairey Deltas proved their potential and versatility In Britain it covers the Fairey Delta 1 and Fairey Delta 2 the proposed Fairey Delta Rocket Fighter and huge Delta 3 long range interceptor and the Avro 707 On the American side it examines the Convair XF 92 and XF 92A the development of the Delta Dagger Delta Dart family and the Convair Sea Dart the world s only supersonic seaplane **A History of Aviation at Brooklands in 100 Objects** Nigel

Spooner,2024-07-30 At the dawn of the twentieth century mankind had not yet achieved powered flight The main motive power then was provided by steam engines heavy dirty and inefficient If one wanted to travel over seas one had to travel on them A journey from London to New York by steam driven train and ship took more than 6 days By the time the same century drew to a close in December 1999 air travel was the normal choice for long journeys Millions of people every day flew comfortably and safely in pressurised aluminium airliners propelled by simple clean and efficient gas turbine engines The same journey from London to New York could be achieved at supersonic speed in less than 6 hours For much of that century many of the extraordinary developments that moved aviation from fragile wood and fabric biplanes to supersonic transports were achieved on 330 acres of low lying former estate farmland in Surrey England The estate was called Brooklands Those marshy acres were transformed from 1907 into the world s first custom built motor racing circuit then a rapidly developing aerodrome and finally one of the country s largest aircraft factories employing tens of thousands of people Nearly 19 000 aircraft of many different types were built at Brooklands during nine decades of peace and war By the 1980s however it was being eclipsed by larger manufacturing sites elsewhere with longer runways and better communications links its owner by

then called British Aerospace finally closed the factory in 1989 This book tells the history of those amazing developments through 100 of the key aircraft engines places and other objects that can still be seen either in or near Brooklands Museum or in other locations around the country It also highlights the stories of six designers whose inspiring creativity produced aircraft engines and weapons ranging from Camel to Concorde Fury to Harrier Wellington to Viscount Merlin to Olympus Between them Thomas Sopwith Barnes Wallis Rex Pierson Sydney Camm Stanley Hooker and George Edwards were responsible for much of what was designed built and flown not only at Brooklands but elsewhere too The book is arranged in successive historical episodes but the many links between the objects and the designers should allow readers to follow different paths if they so wish It is not intended as a technical reference but rather to inspire the reader to seek out the objects and discover more about them

Soviet Secret Projects Tony Buttler, Yefim Gordon, 2004 Among the best selling aviation titles of recent years have been Midland's Lutwaffe and British Secret Projects series Soviet secret projects now come under the spotlight This first volume covers bomber concepts from the various design bureaus from the 1940s onwards Many unusual and sophisticated aircraft are featured in these pages allowing comparisons between what the Soviets were working on and what was being produced in the West during that period

Empire of the Clouds James Hamilton-Paterson, 2010-10-07 In 1945 Britain was the world's leading designer and builder of aircraft a world class achievement that was not mere rhetoric And what aircraft they were The sleek Comet the first jet airliner The awesome delta winged Vulcan an intercontinental bomber that could be thrown about the sky like a fighter The Hawker Hunter the most beautiful fighter jet ever built and the Lightning which could zoom ten miles above the clouds in a couple of minutes and whose pilots rated flying it as better than sex How did Britain so lose the plot that today there is not a single aircraft manufacturer of any significance in the country What became of the great industry of de Havilland or Handley Page And what was it like to be alive in that marvellous post war moment when innovative new British aircraft made their debut and pilots were the rock stars of the age James Hamilton Paterson captures that season of glory in a compelling book that fuses his own memories of being a schoolboy plane spotter with a ruefully realistic history of British decline its loss of self confidence and power It is the story of great and charismatic machines and the men who flew them heroes such as Bill Waterton Neville Duke John Derry and Bill Beaumont who took inconceivable risks so that we could fly without a second thought

British Secret Projects Tony Buttler, 2020 This book completes the process of revising Tony Buttler's successful British Secret Projects titles which have described the design and development of the UK's military aircraft since the mid 1930s The original single volume has now been split into two separate titles the already published British Secret Projects 3 Fighters 1935-1950 and this new book examining the design and development of the British bomber from roughly the introduction of monoplane designs through to the start of the jet era This split has allowed space for the inclusion of much new information and many additional photographs Concentrating on designs that were never built the projects and programs

explored here start with designs that were prepared in the knowledge that war was approaching and go right through to the last generation of British piston engine bombers that appeared after the war had ended As well as the heavies this book also includes medium and light bombers torpedo bombers for the Navy and anti submarine types including flying boats The book includes many three view drawings plus numerous photographs of models or original artist s impressions to show how these unbuilt designs would have appeared all ideal reference material for modelers in particular The text includes full data available on the various types while additional appendices summarize the projects and their covering contracts and specifications

Royal Air Force Bomber Command Losses of the Second World War: Aircraft and crews lost during 1939-1940 W. R. Chorley,1992 This is the first volume in the series which deals with the losses sustained by the RAF Bomber Command during the 2nd World War It has already found favour with historians and those friends and relatives affected by the loss

RAF Bomber Command Losses of the Second World War 8 W. R. Chorley,2003 This series has been of enduring interest over many years and is still highly sought after Apart from the obvious interest to aviation historians many people researching family history find these books invaluable as so many families had someone in an RAF bomber squadron who failed to return from active service With the interest in family history increasing all the time and with many now seeking detailed information about wartime careers of relatives the series will continue to be used by those seeking to find out more about fathers grandfathers and other relatives who flew with and died in the service of Bomber Command during World War 2

Flypast ,2007 **Aviation News** ,2007-07 *Flying Guns of the Modern Era* Anthony G. Williams,Emmanuel Gustin,2004-08-06 *Flying Guns of The Modern Era* describes the history of aircraft guns their ammunition and their installations in aircraft from the end of WW2 to the present day This period has seen the development of guided missiles for both the air to air and ground attack roles Technical history covering post war development of guns and their ammunition

Air Pictorial ,2002 Icon ,2008 Sound Barrier Peter Caygill,2006 As the speed of early aircraft gradually increased there eventually became awareness during the 1940 s that strange things were occurring at around 500mph Many later WW2 fighter aircraft were reported to become dangerously uncontrollable in high speed power dives Pilot s and aircraft designers were beginning to encounter the sound barrier We now realize it to be a phenomenon that occurs when the speed of sound is reached and air compressibility demands additional power to break through it Breaking the sound barrier became one of the biggest challenges to the world s aircraft designers and it took great courage and daring for the test pilots of that era to find the way through this difficult obstacle This is the story of how innovative design and pilots learned how to deal with supersonic flight It records the many different experimental aircraft and tells of the experiences of those that flew them Many pilots lost their lives during those dangerous flights but those who survived became legendary
