Calcium And Contractility Smooth Muscle:

Calcium and Contractility A. K. Grover, E. E. Daniels, 2012-12-06 In organizing the present volume we had two intentions The first was to present the best current understanding of the mechanisms of calcium mobilization during excitation contraction coupling of smooth muscle at a level suited to the needs of professionals interested in smooth muscle pharmacology and pathophysiology while remaining appreciable by graduate and medical students The second intention was to provide insight into present day controversies as well as the latest advances achieved by researchers in this field Thus we have thoroughly discussed both the techniques and the concepts derived from their application An attempt has also been made here to answer a number of profoundly important questions What are the mechanisms and agents responsible for the control of contractility What are the accompanying changes in the state of intracellular calcium ions and the mechanisms responsible for them How does the regulation of contractility occur directly at the level of the actomyosin activity What role do gap junctions play in cell to cell coupling What are the roles of cholinergic adrenergic peptidergic and nonadrenergic noncholinergic interactions in calcium mobilization in smooth muscle What changes occur in hypertension The impact of these recent techniques on future research is also reflected upon

Regulation of Smooth Muscle Contraction Robert S. Moreland, 2012-12-06 Sixth Annual Graduate Hospital Research Symposium REGULATION OF SMOOTH MUSCLE PROGRESS IN SOLVING THE PUZZLE Every so often a scientific conference comes at a time when everyone has new and exciting information when old dogmas do not seem to be as well established and when speakers and participants alike are ready to challenge interpretations of old and new experimental data This was such a conference What turns on a smooth muscle cell The precise answer to this question has eluded scientists for much longer than I have been involved in the field We know that an increase in cytosolic calcium is necessary and we know that phosphorylation of the 20 kDa myosin light chain is an important step in the process We do not know if other processes are necessary for the initiation and maintenance of a smooth muscle contraction nor do we know if other processes modulate the regulation of contraction The goal of the symposium on which this volume is based was to explore the most current hypotheses for the answers to these questions I believe that after reading the chapters included in this volume you will agree that this goal was achieved The importance of calcium and calmodulin dependent myosin light chain phosphorylation in the regulation of smooth muscle contraction was reinforced by many presentations However the status of myosin light chain phosphorylation as a simple calcium dependent switch came under serious suspicion
