**Ancient Seismites** Frank R. Etensohn, Nicholas Rast, Carlton Elliot Brett, 2002 [Ancient Seismites](#) Frank R. Etensohn, Nicholas Rast, Carlton Elliot Brett, 2018 [Ancient Earthquakes](#) M. Sintubin, 2010 Ancient earthquakes are pre instrumental earthquakes that can only be identified through indirect evidence in the archaeological archaeoseismology and geological palaeoseismology record Special Paper 471 includes a selection of cases convincingly illustrating the different ways the archaeological record is used in earthquake studies The first series of papers focuses on the relationship between human prehistory and tectonically active environments and on the wide range of societal responses to historically known earthquakes The bulk of papers concerns archaeoseismology showing the diversity of approaches the wide range of disciplines involved and its potential to contribute to a better understanding of earthquake history Ancient Earthquakes will be of interest to the broad community of earth scientists seismologists historians and archaeologists active in and around archaeological sites in the many regions around the world threatened by seismic hazards This Special Paper frames in the International Geoscience Programme IGCP 567 Earthquake Archaeology Archaeoseismology along the Alpine Himalayan Seismic Zone Publisher s description *Sedimentary Dynamics of Windfield-Source-Basin System* Zaixing Jiang, 2018-03-06 This book introduces the geological concept of the windfield source basin system based on integrated modern and ancient sedimentology studies It identifies wind field as a main sedimentation controlling factor that combines with provenance and basin dynamics to determine the formation and distribution of depositional systems Using the unary properties of facies sedimentary models and the duality properties of source to sink approaches the concept of a wind source basin system introduces the sedimentary system trinity wind field provenance and basin properties Wind source basin systems provide more plausible genetic interpretations of depositional systems including both continental and marine facies and clastic and carbonate systems as well as more comprehensive and precise predictions of depositional systems hydrocarbon reservoirs in unknown regions Further the book proposes a series of methods on paleowind field reconstruction which fill the gaps in paleo atmospheric field studies in paleoclimatology and shows that allocating relationships among source reservoir cap in petroliferous basins are limited by the wind source basin system This trinity system also provides a new perspective on petroleum geology assessment The book appeals to all those engaged in sedimentology petroleum geology and climatology studies **The Ordos Basin** Renchao Yang, A.J. (Tom) Van Loon, 2021-11-30 The Ordos Basin Sedimentological Research for Hydrocarbons Exploration provides an overview of sedimentological approaches used in the lacustrine Ordos Basin but also applicable in other marine and lacustrine basins to make hydrocarbon exploration more efficient Oil exploration is becoming increasingly focused on tight sandstone reservoirs and shales The development of these reservoirs particularly regarding the sedimentary processes and the resulting sediments are still poorly understood Exploration and exploitation of such reservoirs requires new insights into the lateral and vertical facies changes and as already indicated above the knowledge surrounding

facies and how they change in deep water environments is still relatively unclear Covers several geological aspects so the reader may well understand the context of the various chapters Explores and explains the important relationship between sedimentology and hydrocarbon explorations Highlights the significance of sedimentological aspects facies porosity etc for basin analysis and the development of energy resources

### **Palaeoproterozoic Supercontinents and Global Evolution**

Steven Michael Reddy, 2009 The Palaeoproterozoic era 2500 1600 Ma is a critical period of Earth history with dynamic evolution from the deep planetary interior to its surface environment Several lines of geological evidence suggest the existence of at least one pre Rodinia supercontinent named Nuna or Columbia which formed near the end of Palaeoproterozoic time Prior to this assembly there may have been an older supercontinent Kenorland or perhaps only independently drifting supercratons The tectonic records of amalgamation and dispersal of these ancient landmasses provide a framework that links processes of the deep Earth with those of its fluid envelope The sixteen papers in this volume present reviews and new analytical data that span the geological record of Palaeoproterozoic Earth The volume is useful as a reference book for students and professional geoscientists interested in this important period of global evolution

### Perspectives in Carbonate Geology Peter K. Swart, Gregor P. Eberli, Judith A.

McKenzie, 2009-04-06 This special publication *Perspectives in Carbonate Geology* is a collection of papers most of which were presented at a symposium to honor the 80th birthday of Bob Ginsburg at the meeting of Geological Society of America in Salt Lake City in 2005 The majority of the papers in this publication are connected with the study of modern carbonate sediments Bob Ginsburg pioneered the concept of comparative sedimentology that is using the modern to compare to and relate to and understand the ancient These studies are concerned with Bob's areas of passion coral reefs and sea level submarine cementation and formation of beach rock surface sediments on Great Bahama Bank and other platforms origin of ooids coastal sediments formation of stromatolites impact of storms on sediments and the formation of dolomite The remainder of the papers apply the study of modern environments and sedimentary processes to ancient sediments Recent other publications of the International Association of Sedimentologists SPECIAL PUBLICATIONS 40 Analogue and Numerical

*Sedimentary Processes, Environments and Basins* Gary Nichols, Ed Williams, Chris Paola, 2007 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists This collection of papers is a survey of the research frontier in basin dynamics a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers The papers in this book fall into four themes Tectonics and sedimentation Landscape evolution and provenance Depositional systems and Fluvial sedimentation which reflect Peter's research interests and are all important areas of current research in sedimentary geology There are both case studies and review articles on these themes which reflect recent work but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth sciences
