[All About a Boy Who Was Afraid of the Dark](#) Ann Marie Hannon,2017-03-27 Patrick has been afraid of things before but this time when he is almost two years old just before his birthday he wakes up at midnight only to learn that he is afraid of the dark Can Patrick s older sister Margy help Patrick to stop being afraid Read how it all develops if brother and sister work as a team **The semantics of English -ment nominalizations** Lea Kawaletz,2023-06-02 It is well known that derivational affixes can be highly polysemous producing a range of different often related meanings For example English deverbal nouns with the suffix er can denote instruments opener agents writer locations diner or patients loaner It is commonly assumed that this polysemy arises through a compositional process in which the affix interacts with the semantics of the base Yet despite intensive research in recent years a workable model for this interaction is still under debate In order to study and model the semantic contributions of the base and of the affix a framework is needed in which meanings can be composed and decomposed In this book I formalize the semantic input and output of derivation by means of frames that is recursive attribute value structures that serve to model mental representations of concepts In my approach the input frame offers an array of semantic elements from which an affix may select to construct the derivative s meaning The relationship between base and derivative is made explicit by integrating their respective frame semantic representations into lexical rules and inheritance hierarchies I apply this approach to a qualitative corpus study of the productive relationship between the English nominalizing suffix ment and a semantically delimited set of verbal bases My data set consists of 40 neologisms with base verbs from two semantic classes namely change of state verbs and verbs of psychological state I analyze 369 attestations which were elicited from various corpora with a purposeful sampling approach and which were hand coded using common semantic categories such as event state patient and stimulus My results show that ment can target a systematically restricted set of elements in the frame of a given base verb It thereby produces a range of possible readings in each derivative which becomes ultimately interpretable only within a specific context The derivational process is governed by an interaction of the semantic elements provided by the base on the one hand with properties of the affix e g ment s aversion to

animate readings on the other. For instance, a shift from the verb *annoy* to a result state reading in *annoyment* is possible because the input frame of verbs of psychological state offers a RESULT STATE attribute which, as is fixed in the inheritance hierarchy, is compatible with *ment*. Meanwhile, a shift from *annoy* to an experiencer reading in *annoyment* fails because the value range of the attribute EXPERIENER is fixed to animate entities so that *ment*'s animacy constraint blocks the inheritance mechanism. Furthermore, a quantitative exploration of my data set reveals a likely blocking effect for some *ment* readings. Thus, while I have found most expected combinations of nominalization and reading attested, there are pronounced gaps for readings like *instrument* or *stimulus*. Such readings are likely to be produced by standardly subject-denoting suffixes such as *-er* or *-ant* which may reduce the probability for *ment* derivation. The quantitative analysis furthermore shows that within the subset of attested combinations, ambiguity is widespread, with 43% of all combinations of nominalization and reading being only attested ambiguously. This book shows how a derivational process acts on the semantics of a given verbal base by reporting on an in-depth qualitative study of the semantic contributions of both the base and the affix. Furthermore, it demonstrates that an explicit semantic decomposition of the base is essential for the analysis of the resulting derivative's semantics.
