Current Perinatology:

Current Controversies in Perinatology, An Issue of Clinics in Perinatology Robert H. Lane, 2014-11-20 Neonatal perinatal medicine has a strong history of evidence based practice but unfortunately there remain many areas of uncertainty and unproven hypotheses and treatments that may harm our highly vulnerable patients When new ideas are introduced into the labor and delivery room or the NICU we have to evaluate these procedures and therapies before they become accepted as standards of care We need to learn from the past lessons of grey baby syndrome and chloramphenicol and of kernicterus and sulfonamide antibiotics where therapeutic good intentions actually did more harm than good and increased the mortality rate of premature babies in the NICU This proposed edition addresses a broad range of current topics in perinatal neonatal practice The AAP has just issued new guidelines for the approach to a neonate exposed to maternal genital herpes virus infection The recommendations were not evidence based and are highly controversial as well as confusing These topics are addressed in a scholarly and objective manner to both address the controversy and help the practitioner make informed decisions

Current Perinatology Manohar Rathi, 2012-12-06 *Current Perinatology II* explores the most recent major research techniques utilized in the evaluation diagnosis and management of the high risk mother and her newborn The volume should be a major reference for pediatricians perinatologists and neonatologists as well as for nurses and allied health personnel closely involved with the care of the high risk mother fetus and newborn Topics presented include perinatal Doppler Doppler echocardiography of the human fetus invasive fetal assessment by fetal blood sampling prediction prevention and treatment of preterm labor percutaneous umbilical blood sampling and intravascular fetal therapy current and future perspectives for fetal genetic diagnosis current concepts of substance abuse during pregnancy newer methods of diagnosis and treatment of neonatal sepsis clinical applications of neonatal pulmonary function testing and current management of hypoplastic left heart syndrome Discussions of stabilization and transportation of the critically ill obstetric patient and of pain management in the neonatal intensive care unit will be of interest to both physicians and nurses

Current Perinatology Manohar Rathi, 2012-12-06 Perinatal medicine which is concerned with the problems of the fetus and newborn has rapidly developed in the last two decades as an important and challenging specialty Rapid advances in the field coupled with technological advances now are making survival of infants with weights as low as 500 grams possible Ventilator care for severe respiratory problems is on the verge of being replaced by surfactant replacement therapy on the other hand development of such technologies as extracorporeal membrane oxygenation and jet ventilation has revolutionized the care of these sick infants The advances taking place today in the field of perinatal medicine make periodic updates like the one provided by this volume a virtual necessity for clinicians and paramedical personnel alike A distinguished group of specialists in various aspects of perinatal medicine has contributed to this book Their wide ranging experience and points of view should make this book a valuable reference for all physicians and allied health personnel involved in the care of the high

risk fetus and newborn MANOHAR RATHI M D Acknowledgements I am grateful to the contributors for their cooperation in preparing the manuscripts to my associates for their help and support and to the publishers for their continued interest in this work Above all I thank Ms Rose Aiello Lech and Ms MaryAnn Cichowski for their hard work in making this publication possible

Current Topics in Perinatology and Neonatology Nazan Yurtcu, 2023-04-28 Medical and surgical care have made considerable progress in the last two decades in the care of the mother fetus and neonate Most of the improvement in outcomes has been related to advances in diagnostic and therapeutic modalities These advances have only been possible due to dramatic progress in our knowledge of the physiological mechanisms that determine the normal development of organ systems as well as the alterations that can lead to disease states and their multifarious consequences Because improved antenatal care has resulted in the survival of greater numbers of immature infants they have become a major challenge for clinicians due to the immaturity of multiple organs and their susceptibility to long term sequelae The aim of this book is not to address all aspects related to the newborn lung but to discuss those areas that are more novel or controversial or have been of greater relevance in the progress of maternal fetal and neonatal care Where possible we have attempted to meet the expectation that practice guidelines be based either on convincing available evidence or on consensus statements of authoritative organizations Therefore this book should be useful to obstetricians perinatologists and neonatologists

Current Concepts in Neonatal Nutrition, an Issue of Clinics in Perinatology Brenda Poindexter,2014-06-02 Over the past several decades advances in neonatal nutrition have focused on the provision of early parenteral nutrition and the development of formulas and supplements that most closely approximate maternal breast milk The overall outcomes for infants including premature infants have greatly benefited from these advances but there are still many nutritional unknowns that impact the lives of neonates This is an exciting time in neonatal nutrition as the focus has shifted from survival and growth which are still important goals to effects of each micro macronutrient on development prevention of disease states such as ROP the effects of neonatal nutrition on future health as an adult and opportunities to improve long term neurodevelopmental outcomes by optimal early nutrition This issue focuses on aspects of enteral and parenteral nutrition that are at the forefront of neonatal care assessing growth parenteral nutrition components including alternate lipid formulations optimal storage and use of human milk including donor milk post discharge nutrition and the effects of various micro macronutrients on long term developmental outcomes It is anticipated that the study and implementation of many of these novel concepts into the care of neonates many of whom are severely premature will be of value to practitioners researchers and most of all patients Clinics in perinatology : current controversies in perinatal medicine IV.
