For example, there are three papers on post-partum psychiatric disorder which seem out of place here, and two on historical and literary characters which throw little light on the question of suicide in pregnancy, besides being somewhat fanciful. A slimmer and more carefully edited book could have addressed the topic more adequately. Its current cost is likely to put this publication out of the reach of those professionals likely to come across patients at risk.

Current Psychiatric Therapies, Vol. 12—1983. Edited by JULES H. MASSERMAN. Orlando, Florida: Grune & Stratton, 1984. Pp. 267. \$49.50.

In this annual which is supposed to review progress in various psychiatric therapies, 30 authors have presented papers in 267 pages. The brief accounts are grouped in the sub-headings: psychotherapies, management of addictions, psychopharmacology, institutional and trans-cultural therapies. Within these sub-headings the topics cover a wide range, most authors promoting their own treatment programmes while a few however have undertaken a more detached review.

The book reads like a volume of short stories, as one skips from one author to another. The Editor begins and ends the book with an expression of his deeply held views on the damage to psychosocial well-being of the threat of a nuclear holocaust. Within this sombre frame, the various contributions vary in length and quality. Some are interesting (programmes for addicted physicians and for cocaine abuse); some are well written (obsessive compulsive behaviour treatment, approaches to the syndrome of alcoholism); some are idiosyncratic (body movement in psychotherapy, parental treatment of anorexia nervosa) and some are very short (Islamic therapy for the aged—60 lines).

This book makes no scientific case for progress but as a pot-pourri of American psychiatric practice it has some curiosity value.

Modulation of Sensorimotor Activity During Alterations in Behavioural States. Edited by ROSSANO BANDETTI. New York: Alan R. Liss, 1984. Pp. 335. £32.00.

This is an extremely interesting book, which will appeal to those with some knowledge of neurophysiology. It contains the proceedings of a symposium held in September 1983. The unifying theme is how the activity in relatively simple neural pathways is modified by changes in other areas of the central nervous system, or by such

behavioural states as arousal, sleep, aggression and hormonal changes.

Early chapters describe the pathways of monoamine neurones to the cerebral cortex, and the connections of the brainstem dopamine cells to other brain areas. There follow accounts of single neurone electrical activity recorded in freely moving animals, including recordings from dopamine neurones of the substantia nigra during the sleep-wake cycle, and from serotonin and nor-adrenaline neurones.

The focus of schizophrenia research has recently shifted from the nucleus accumbens to the amygdala and this book gives an interesting insight to recent understanding of the function of amygdala. A chapter by Mogenson is especially interesting and proposes a role for the dopamine pathway to the nucleus accumbens in toning and gating the impulse flow from the amygdala and the hippocampus to the subthalamic region. Another chapter describes the amygdala as controlling the biting reflex by modifying the area of the sensory field.

Other topics include modulation by benzodiazepines of responsiveness to neurotransmitters, such as acetyl choline, dopamine and serotonin, the post-ictal brain changes associated with aggression, and the role of monoamines in selective attention and reward.

This book will be of interest to all neuroscientists concerned with the relationship of brain mechanisms to behavioural processes.

Origins and Evolution of Behavior Disorders: From Infancy to Early Adult Life. By STELLA CHESS and ALEXANDER THOMAS. New York: Brunner/Mazel, 1984. Pp. 327. \$30.00.

The New York longitudinal study remains one of the landmarks in the history of child psychiatry research. Starting in 1956 a group of 133 subjects has been followed up from infancy to early adult life. From its very beginning the study broke new ground. Of particular importance was its, at the time, almost heretical view, that the child's own temperament would have an impact on its environment and might be an important determinant of outcome. Equally influential was its pioneering use of careful definitions and structured interviews designed to obtain clinically orientated child development data.

This book by two of the original authors Stella Chess and Alexander Thomas is the culminating report providing a complete overview of the study. It is possible to complain about the unrepresentative nature of the original sample (somewhat but not totally unfairly described by critics as the children of Jewish New York psychiatrists). These criticisms pale however against the breadth and detail of the study itself. Using their research data and a number of fascinating case histories Chess and Thomas deal with the two themes of personality development and the origins of mental disorder. Despite the fact that the
