

Trauma and the Developing Brain

Healthy Brain

This PET scan of the brain of a normal child shows a pattern of high levels and low levels of metabolic activity. At birth, only primitive functions such as the brain stem function are fully functional. As regions like the temporal lobes begin to mature, early childhood experiences enter the circuit.

Front

An Abused Brain

This PET scan of the brain of a five-month-old child, who was severely traumatized shortly after birth, shows the effect of extreme deprivation in infancy. The temporal lobes begin to mature, but the early experiences have caused a permanent, high level of metabolic activity and a low level of metabolic activity in the temporal lobes. Both children suffer emotional and cognitive problems.

Written by a respected expert in forensics who also brings a much needed biological background to the task, this resource champions contemporary biological theory by introducing criminologists to areas of research they might not otherwise encounter. It discusses basic biological concepts such as natural selection and evolution in relation to behavior and considers patterns of inheritance, sex-linked traits, and propensities toward aggression. Explores studies on hormonal effects as well as brain chemistry and delves deeply into organic brain dysfunction and looks at investigations into fetal conditions and birth-related difficulties as well as research on nutrition and food allergies. While steeped in scientific research, the material does not require a scientific background. **Rehabilitation Literature**, 1964 Genetic Psychology Monographs Carl Murchison, 1971
