The Brain in Hominid Evolution Phillip V. Tobias, 1971 **The Lives of the Brain** John S. Allen, 2010-02-15 Though we have other distinguishing characteristics bipedalism relative hairlessness etc the brain and the behavior it produces are what truly set us apart from the other apes and primates How this three pound organ composed of water fat and protein turned a mammal species into the dominant animal on earth is the story Allen tells *Survival of the Fattest* Stephen C. Cunnane, 2005 How did humans evolve larger and more sophisticated brains In general evolution depends on a special combination of circumstances part genetics part time and part environment In the case of human brain evolution the main environmental influence was adaptation to a OCyshore basedOCO diet which provided the worldOCO's richest source of nutrition as well as a sedentary lifestyle that promoted fat deposition Such a diet included shellfish fish marsh plants frogs birdOCO's eggs etc Humans and and more importantly hominid babies started to get fat a crucial distinction that led to the development of larger brains and to the evolution of modern humans A larger brain is expensive to maintain and this increasing demand for energy results in succinctly survival of the fattest **Evolution of the Brain: Creation of the Self** John C. Eccles, 2005-07-05 Sir John Eccles a distinguished scientist and Nobel Prize winner who has devoted his scientific life to the study of the mammalian brain tells the story of how we came to be not only as animals at the end of the hominid evolutionary line but also as human persons possessed of reflective consciousness *Human Brain Evolution* Stephen Cunnane, Kathlyn Stewart, 2010-07-30 The evolution of the human brain and cognitive ability is one of the central themes of physical biological anthropology This book discusses the emergence of human cognition at a conceptual level describing it as a process of long adaptive stasis interrupted by short periods of cognitive advance These advances were not linear and directed but were acquired indirectly as part of changing human behaviors in other words through the process of exaptation acquisition of a function for which it was not originally selected Based on studies of the modern human brain certain prerequisites were needed for the development of the early brain and associated cognitive advances This book documents the energy and nutrient constraints of the modern brain highlighting the significant role of long chain polyunsaturated fatty acids LC PUFA in brain development and maintenance Crawford provides further emphasis for the role of essential fatty acids in particular DHA in brain development by discussing the evolution of the eye and neural systems This is an ideal book for Graduate students post docs research scientists in Physical Biological Anthropology Human Biology Archaeology Nutrition Cognitive Science Neurosciences It is also an excellent selection for a grad student discussion seminar The Human Fossil Record, Brain Endocasts--The Paleoneurological Evidence Jeffrey H. Schwartz, Ian Tattersall, Ralph L. Holloway, 2002 The Human Fossil Record Volume one Terminology and Craniodental Morphology of Genus Homo Europe Jeffrey H Schwartz Ian Tattersall The Human Fossil Record series is the most authoritative and comprehensive documentation of the fossil evidence relevant to the study of our evolutionary past This first volume covers the craniodental remains from Europe that have been

attributed to the genus Homo Here the authors also clearly define the terminology and descriptive protocol that is applied uniformly throughout the series Organized alphabetically by site name each entry includes clear descriptions and original expertly taken photographs as well as Morphology Location information History of discovery Previous systematic assessments of the fossils Geological archaeological and faunal contexts Dating References to the primary literature The Human Fossil Record series is truly a must have reference for anyone seriously interested in the study of human evolution

Big Brains and the Human Superorganism Niccolo Leo Caldararo,2017-09-05 This book examines why humans have big brains what big brains enable us to do and how specialized brains are associated with eusociality in animals It explores why brains expanded so slowly and then why they stopped growing This book whittles down the theories on brain size evolution to a few that represent testable hypotheses to identify logical and practical explanations for the phenomenon At the core of this book is data derived from original previously unpublished research on brain size in a number of social mammals This data supports the idea that evolution of the brain in humans is the result of social interaction This book also traces the products of the social brain ideology religion urban life housing and learning and adapting to dense complex social interactions It uniquely compares brain evolution in social animals across the animal kingdom and examines the nature of the human brain and its evolution within the social and historical context of complex human social structures *Big Brains and the Human Superorganism* Niccolo Leo

Olduvai Gorge, 1951-1961: The skulls, endocasts, and teeth of Homo Habilis Louis Seymour Bazett Leakey, 1991 At Olduvai Gorge in northern Tanzania natural erosion exposed a series of superimposed geological beds containing rich artefacts and fossil assemblages spanning the last 1.8 million years The site is famous for the excavations conducted there since 1951 under the direction of Mary Leakey and her husband This book records the archaeological finds in the upper part of the Olduvai Gorge sequence covering the period 1.2 to 0.4 million years ago and includes artefacts and faunal remains excavated from sites in Beds III IV and the Masek Beds Mary Leakey's analysis is supported by chapters from other authors summarising the geological background and providing detailed analyses of the manufacture and use of tools found on the site

Thinking Big Clive Gamble, John Gowlett, 2014-05-19 Tested against archaeological evidence this pathbreaking and provocative book shows we still inhabit social worlds that originated deep in our evolutionary past Our virtual contact lists whether on Facebook or Twitter are on average about 150 the so called Dunbar's Number some three times the size of those of apes and our early ancestors When and how did the brains of our hominin ancestors become human minds When and why did our capacity for language or art music and dance evolve The fruits of over seven years of research Thinking Big suggests that it was the need for early humans to live in ever larger social groups that drove the enlargement of the human brain and the development of the human mind The three authors are co-directors of the research project Lucy to Language the Archaeology of the Social Brain Thinking Big is destined to become a classic Brian Fagan Emeritus Professor of Anthropology University of California

Origins of the Human Brain Jean-Pierre Changeux, Jean Chavaillon, 1995 Throughout history humans have been fascinated by their origins The evolutionary development of the human brain has been of particular interest since our intellectual emotional and cultural capacities are considered to be unique among animals This book brings together a group of eminent scientists from the fields of evolutionary biology anthropology neuroscience and psychology Their views provide a starting point for a debate based on the most recent scientific data relating to the evolutionary origins of the human brain drawing together knowledge from sciences of the past paleontology archaeology and those of the present and future molecular neurobiology population genetics The result is a lively informative and valuable synthesis that will interest a wide range of students and researchers in these fields
