Current Topics In Cellular Regulation Volume 10:

Principles of Metabolic Control in Mammalian Systems Herman, 2013-11-11 In this work we present the basic principles of metabolic control which we hope will serve as a foundation for the vast array of factual matter which the biochemist and the physician engaged in metabolic research must accumulate Accordingly we attempt to set forth these principles along with sufficient explanation so that the reader may apply them to the ever expanding literature of biochemistry If we are successful this will provide a theoretical approach which can be applied to any given set of metabolic reactions It is impossible to enumerate each and every biochemical reaction and pathway since such a work would be too unwieldy for efficient use Rather we hope our presentation of the principles of metabolic control will be sufficiently basic to be of lasting usefulness no matter how detailed biochemistry may become We would like to be able to condense biochemistry into a theoretical biology that will not only allow for the general treatment of any given reaction but will enable predictions to be made as to the existence of necessary pathways and the consequences of altered control Such is not possible today but this may be accomplished in the future We believe it is now possible to institute the beginnings of such a theoretical biology

Current Topics in Cellular Regulation Bernard L. Horecker, Earl R. Stadtman, 2014-06-28 Current Topics in Cellular Regulation Volume 10 presents the fundamental mechanisms involved in the regulation of diverse cellular activities including cellular differentiation intermediary metabolism and the transfer of genetic information This book provides information pertinent to the various aspects of cellular regulation Organized into six chapters this volume begins with an overview of the enzymes that exhibit half of the sites activity This text then examines the two different aspects of cyclic AMP mediated systems Other chapters consider the possible role of citrate synthase in the regulation of the citric acid cycle This book discusses as well the regulation of the pentose phosphate pathway The final chapter reviews the evidence for the occurrence of futile cycles at three control points in the metabolism of glucose namely at the level of glucose phosphorylation at the interconversion of fructose mono and biophosphates and between pyruvate and phosphoenol pyruvate This book is a valuable resource for biochemists biologists and research workers
