Customized Artificial Implants: Bionic Design and Multiscale Evaluation Zhenxian Chen, Yongtao Lyu, Junyan Li, Xijin Hua, 2024-05-24 Artificial implants have been commonly used to replace or fix damaged tissue in orthopedics. However, due to the inter-individual differences and the complexities of anatomical structures and load conditions, traditional implants cannot meet the clinical requirements. In recent years, questions relating to customized artificial implants have been getting more and more attention from the research community. Challenges to implementing precision design and evaluation arise not only from the design need of considering bionic structures, kinematical function, mechanical performances, and biological functional similarity, but also from the multiscale comprehensive evaluation, the latter involves biomechanics and biotribology of musculoskeletal systems from macro musculoskeletal multibody dynamics to micromechanics of porous structures. Established analysis technologies such as musculoskeletal multibody dynamics modeling and neuromusculoskeletal modeling are being well developed and evolved through combining coupling with finite element analyses and more recently by novel artificial intelligence approaches.

**Handbook of Research on Emerging Innovations in Rail Transportation Engineering** Rai, B. Umesh, 2016-05-31 The rail-based transit system is a popular public transportation option not just with members of the public but also with policy makers looking to install a form of convenient and rapid travel. Even for moving bulk freight long distances, a rail-based system is the most sustainable transportation system currently available. The Handbook of Research on Emerging Innovations in Rail Transportation Engineering presents the latest research on next-generation public transportation infrastructures, emphasizing a diverse set of topics related to rail-based transportation such as funding issues, policy design, traffic planning, and forecasting, and engineering solutions. This comprehensive publication is an essential resource for transportation planners, engineers, policymakers, and graduate-level engineering students interested in uncovering research-based solutions, recommendations, and examples of modern rail transportation systems.
