Controlling Aircraft—From Humans to Autonomous Systems Aharon David, 2024-09-25 Paris June 18 1914 Crowds gathered at the Concours de la Sécurité et de l'Aviation pour assister à l'essai d'un aéroplane à gouverner automatiquement par un gyroscope. Lawrence Sperry démontra son nouvel inventif, le stabilisateur gyroscopique. Avec ses mains dans l'air, le dispositif fit voler son Curtiss C-2 flying boat. Only a decade after the Wright brothers' initial flight, the first autopilot made its public debut. As impressive as this public demonstration was, it was merely a humble, although spectacular, moment of foreshadowing. Even today, 110 years later, the process of automating aspects of flight has not yet fully concluded, leading to deteriorating insight into the automatic behavior of aircraft systems and even the waning of human instincts and intuition.

Controlling Aircraft: From Humans to Autonomous Systems Rise of the Machines covers the distancing of humans from their flying machines through more than a century-long process of assisting systems' introduction, the positive and negative consequences of this process, and mitigation solutions for the negative consequences. Koglbauer, Sonja Biede-Straussberger, 2024-08-12 Explore the critical importance of integrating the human element in aerospace. Based on cutting-edge research, written by experts from academia and industry, it explores the use of extended reality technologies. In the face of evolving technological and societal challenges, this book delves into advanced techniques essential for integrating the human element in aerospace operations and development. Written by experts from academia and the aerospace industry, the volume explores powerful techniques for system safety engineering, innovative design approaches for cockpits, cabins, and space vehicles, and strategies for creating effective assistance systems and implementing artificial intelligence. Chapters present methods for studying typical hazards related to human operations in space, in the air, and on the ground. Additionally, the book explores the use of extended reality technologies, e.g., virtual, augmented, and mixed reality, to enhance operators' perceptions and explore uncharted territories in the universe. Proposals are also made for advancing industry standards and effectively integrating human and organizational factors within the aviation industry. This is an invaluable resource for practitioners, researchers, and students interested in aerospace, as well as professionals from other safety-critical domains, e.g., medicine, automotive, rail.

Aircraft Components Facundo Conforti, The airplane, a masterpiece of engineering, remains a mystery to anyone who does not delve into its detailed study and analysis. Pilots are an integral part of this grand work of engineering; without them, the aircraft itself would lack purpose. As part of this intricate system, the pilot must understand each of the components that make up the entirety of the aircraft, not only to operate it safely but also to comprehend its behavior when one of its systems malfunctions without warning. In this new addition to the aeronautical library, you will learn about the primary components of the aircraft, the heart of the machine, and all its functions. You will discover everything about the aircraft engine and its instruments, not just the power indication instruments but also

navigation attitude and other critical systems By becoming familiar with your aircraft's engine and the instruments with which it may be equipped your flight performance will surpass that of others You will fly with an understanding of every sound every indication and every response from the aircraft Taking your professional career to the highest level is not only about accumulating experience and flight hours but also about filling your path with theoretical knowledge that will accompany you throughout your aeronautical life

**Aviation and Human Factors** Jose Sanchez-Alarcos,2019-06-19 Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances to winning a jackpot in any of the major lotteries However keeping or improving that performance level requires a critical analysis of some events that despite scarce point to structural failures in the learning process The effect of these failures could increase soon if there is not a clear and right development path This book tries to identify what is wrong why there are things to fix and some human factors principles to keep in aircraft design and operations Features Shows through different events how the system learns through technology practices and regulations and the pitfalls of that learning process Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough Presents air safety management as a successful process but at the same time failures coming from technological and organizational features are shown Offers ways to improve from the human factors side by getting the right lessons from recent events
