0 To 100 Number Line:

Using Number Lines with 5-8 Year Olds Fran Mosley,2001 This book is your guide to getting the most out of number lines and tracks It offers activities for the main part of the mathematics lesson as well as quick and easy starters These activities enable you to use number lines to teach key mathematical topics and support children in counting and calculating *Maths Like a Ninja* Andrew Jennings,2023-01-05 _____ Another brilliant book that s jam packed with top class tips you won t want to miss MC Grammar teacher and parent Here is basically the bible for parents like me with kids in junior school it s everything a parent needs to know and understand in the curriculum from fractions basics to calculating the volume of a cuboid and everything in between Sara Davies MBE Founder of Crafter s Companion and Dragon on BBC Dragons Den _____

When your child comes home with the dreaded maths homework and you don t know your BIDMAS from your BODMAS then *Maths Like a Ninja* is the book for you It s jam packed full of all the key concepts children need to know all the mathematical terminology they ll ever come across in primary school and tons of easy to follow visual examples on every area of maths featured in the Key Stage 2 curriculum Whether a child is stuck on a fractions question or struggling to remember what composite numbers are they ll find the answer in this handy all in one reference guide It supports teachers in planning and delivering lessons and shows parents how help their kids at home Written by a practising teacher and creator of the successful Vocabulary Ninja brand this book is worth its weight in gold It empowers children to become independent in school and at home by providing them with all the information they need in one place Neat affordable and child friendly *Maths Like a Ninja* is game changing Perfect for Key Stage 2 children aged 7 and up *Maths Like a Ninja* was a finalist in the Maths category at the Teach Primary Awards 2023

On the Development of Space-Number Relations: Linguistic and Cognitive Determinants, Influences, and Associations Hans-Christoph Nuerk,Krzysztof Cipora, Frank

Domahs,Maciej Haman,2020-03-30 **Numerical Development - From cognitive functions to neural underpinnings** Korbinian Moeller,Elise Klein,Klaus F Willmes - von Hinckeldey,Karin Kucian,2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different

neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

Linguistic Influences on Mathematical Cognition Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing
