Abstract

Recently, some scientific communities have begun to consider more critically what should be carried out to maintain natural resources and control energy consumption. Energy storage systems can performance a crucial part in a diverse range of manufacturing usages and bulk energy storage systems. High reliability, specific energy, superior power, and acceptable safety are regarded as the significant criteria of these systems, as mentioned earlier. Flexible supercapacitors are unanimously introduced as a promising energy storage technology because of their favorable features like high capability, easy fabrication, fast charge/discharge rate, lightweight, environmentally friendly, long lifecycle times, and being flexible. The flexible electrode plays a vital role in a flexible supercapacitor. Carbon materials such as one-dimensional (1D) carbon nanotubes (CNTs), two-dimensional (2D) graphene are significant flexible electrode material for flexible supercapacitors owing to their extensive surface area and high electro-chemical stability.
