the majority of patients that will be treated in cardiovascular clinics will be in the near future elderly patients Even now elderly patients form about one third of the patients with cardiovascular diseases These patients are approached however according to criteria developed for younger populations This is despite the fact that elderly patients differ from younger ones in most aspects including pathology epidemiology pathophysiology diagnostic approach management pharmacology pharmacokinetics rehabilitation and supportive treatment It is the purpose of this book to present to the clinician all drugs with which there is clinical experience in the elderly or which might be potentially useful for the elderly with cardiovascular diseases The data are presented without the authors taking a position This should allow the clinicians to make their own selection and individualize treatment vii viii Preface based on a wide data base Comparative data are presented only when specific comparative studies were performed
