Cardiovascular Dynamics:

Cardiovascular System Dynamics T. Kenner, 2013-11-09 *Cardiovascular Fluid Dynamics* D.H. Bergel, 2012-12-02
Cardiovascular Fluid Dynamics Volume 1 explores some problems and concepts of mammalian cardiovascular function with emphasis on experimental studies and methods. It considers pressure measurement in experimental physiology including the measurements of pulsatile flow, flow velocity, lengths and dimensions, the use of control theory and systems analysis in cardiovascular dynamics, the application of computer models in cardiovascular research, the meaning and measurement of myocardial contractility, and the consequences of the steady state analysis of arterial function. Organized into 10 chapters, this volume begins with an overview of the mammalian cardiovascular system and the essential features of cardiovascular function. It then discusses the practical problems associated with the use of pressure transducers in physiological and cardiac laboratories, the challenges involved in pulsatile flow measurement using flowmeters and thermal devices, and the mechanical analysis of the circulatory system. It explains some computer modeling techniques used in investigating the hemodynamics of the cardiovascular system, including the heart and heart muscle, basic concepts of muscle mechanics, and the mechanical properties of cardiac muscle, the fluid mechanics of heart valves, and the pressure and flow in large arteries. The book concludes with a chapter on vascular resistance and vascular input impedance. This book is intended for biologists, physical scientists, and others interested in cardiovascular physiology. *Cardiovascular Dynamics* Robert Frazer, Rushmer, John R. Blackmon, 1970 **Circulatory System Dynamics** Abraham Noordergraaf, 2012-12-02
Circulatory System Dynamics reviews cardiovascular dynamics from the analytical viewpoint and indicates ways in which the accumulated knowledge can be expanded and applied to further enhance understanding of the normal mammalian circulation, to ascertain the nature of difficulties associated with disease, and to test the effect of treatment. Comprised of 10 chapters, this volume begins with an overview of the circulatory system, including its anatomy and the trigger for myocardial heart muscle contraction. The discussion then turns to measurement of blood pressure using invasive and non-invasive techniques, blood flow measurement with emphasis on cardiac output and measurement in the microcirculation, the system and pulmonary arterial trees, and pulsatile pressure and flow in pulmonary veins. Subsequent chapters explore microcirculation and the anatomy of the microvasculature, the heart and coronary circulation, paying particular attention to the Frank-Starling mechanism and indices of myocardial contractility, and control of blood pressure, peripheral resistance, and cerebral flow. The last two chapters deal with circulatory assistance and the closed cardiovascular system. This book will be of interest to students, practitioners, and researchers in fields ranging from physiology and biology to biochemistry and biophysics. *Research Grants Index* National Institutes of Health (U.S.), Division of Research Grants, 1973 **Comparative Cardiovascular Dynamics of Mammals** John K-J Li, 2024-11-01
Comparative Cardiovascular Dynamics of Mammals offers never before published data on the structure and function of the circulatory systems of the different mammalian species. This text explores classic allometry

dimensional analysis and modern hemodynamics to establish similarity principles that provide a necessary and important step in understanding the natural common design and functional features of the cardiovascular systems of different mammals Fluid and blood vessel mechanics pulse transmission characteristics cardiac energetics and mechanics as well as heart arterial system interaction are included in this essential reference The sensitivity of parameters and similarity of principles in the diagnosis of cardiovascular diseases are also addressed This book also describes the natural processes involved in the functional development of the mammalian cardiovascular system By using modern methods to present recent findings on the similarities and differences of the mammalian cardiovascular system the author provides an easily understood approach to this dynamic field of study

Research Awards Index , Cardiovascular System Dynamics Jan Baan, Abraham Noordergraaf, Jeff Raines, 1978 This book offers a novel approach to the study of the mammalian cardiovascular system Instead of focusing on a particular part of the system or on a particular group of techniques or approaching the system from a particular point of view it stresses a balanced presentation of ideas all the major component parts of the system are discussed as well as the behavior of the system as an integrated whole both basic and clinical viewpoints are represented both detailed analysis and comprehensive synthesis are offered In addition trends in modern instrumentation and the use of computers in improving patient care are important and recurrent themes Spirited discussions of current controversies and philosophies highlight the presentations The 62 papers in this volume were invited for a major international conference held in April 1975 which marked the coming of age of this field and led to the founding of the Cardiovascular System Dynamics Society The conference brought together outstanding researchers in the life sciences biology physiology medicine and the physical sciences biophysics bioengineering in order to integrate their findings more intricately and to chart the present state and future directions of the field Since the cardiovascular system has been one of the first areas to receive attention under the newly emerging symbiosis between engineering and medicine the book also serves a useful secondary purpose as a model of what can be accomplished by such integrated effort The papers are organized into 12 sections The first 9 offer a tour of the cardiovascular system with papers arranged within each section to lead the reader from theoretical to clinical viewpoints Included are sections on cardiac muscle coronary circulation ventricular dynamics systemic arterial tree microcirculation systemic veins pulmonary vasculature control mechanisms in specific vascular beds and cardiovascular system control The last 3 sections offer tutorial overviews of theoretical and experimental methods applied to the cardiovascular system and of cardiovascular instrumentation and computer analysis
