Parasitic Gaps C.R. Tellier, 2012-12-06 The study of parasitic gap constructions e.g. these are the reports which you corrected before filing has been a very lively area of research over the last decade. The impetus behind this lies mostly in the marginality of the construction. Clearly the intuitions that native speakers have about parasitic gaps do not stem from direct instruction; hence it is reasoned such knowledge follows from the restrictions imposed by Universal Grammar. Furthermore, it is unlikely that any principle of Universal Grammar refers specifically to parasitic gap constructions; their syntactic and interpretive properties must instead follow entirely from independent principles. My own interest in the phenomenon was sparked a few years ago when in a novel I came across a sentence like the following: Chait un armateur dont le prestige reposait largement sur la fortune he was a shipbuilder of whom the prestige was largely based on the wealth. As the indices indicate, the interpretation of the French sentence is unambiguous: both the prestige and the wealth necessarily pertain to the same individual. In this aspect, the sentence much resembles the English parasitic gap construction above; in the former case too, the complements of correct and file must corefer with the noun phrase heading the relative. Yet there is an important difference between the two constructions: Verbs like correct and file subcategorize their complements. *The Little SAS Enterprise Guide Book* Susan J. Slaughter, Lora D. Delwiche, 2017-03-22 Whether you are using SAS Enterprise Guide for the first time or are looking to expand your skills, this book provides a series of carefully designed tutorials to help you master the basics of the tasks you'll want to do most frequently. **Advances in Computational Intelligence** Lourdes Martínez-Villaseñor, Oscar Herrera-Alcántara, Hiram Ponce, Félix A. Castro-Espinoza, 2020-10-07 The two-volume set LNAI 12468 and 12469 constitutes the proceedings of the 19th Mexican International Conference on Artificial Intelligence MICAI 2020 held in Mexico City, Mexico, in October 2020. The total of 77 papers presented in these two volumes was carefully reviewed and selected from 186 submissions. The contributions are organized in topical areas as follows: Part I: machine and deep learning, evolutionary and metaheuristic algorithms, and soft computing; Part II: natural language processing, image processing, and pattern recognition, and intelligent applications and robotics. **National Jeweler**, 1930 Morriss's Trade Journal, 1899 *Editor & Publisher*, 1928 Microstructure And Properties Of Materials, Vol 2 James C M Li, 2000-10-09 This is the second volume of an advanced textbook on microstructure and properties of materials. The first volume is on aluminum alloys, nickel-based superalloys, metal matrix composites, polymer matrix composites, ceramics, matrix composites, inorganic glasses, superconducting materials, and magnetic materials. It covers titanium alloys, titanium aluminides, iron aluminides, iron and steels, iron-based bulk amorphous alloys, and nanocrystalline materials. There are many elementary materials science textbooks, but one can find very few advanced texts suitable for graduate school courses. The contributors to this volume are experts in the subject and hence, together with the first volume, it is a good text for graduate microstructure courses. It is a rich source of design ideas and applications and will provide a good understanding of how microstructure affects the properties of materials. Chapter 1 on titanium alloys covers production, thermomechanical processing, microstructure

mechanical properties and applications Chapter 2 on titanium aluminides discusses phase stability bulk and defect properties deformation mechanisms of single phase materials and polysynthetically twinned crystals and interfacial structures and energies between phases of different compositions Chapter 3 on iron aluminides reviews the physical and mechanical metallurgy of Fe<sub>3</sub>Al and FeAl the two important structural intermetallics Chapter 4 on iron and steels presents methodology microstructure at various levels strength ductility and strengthening toughness and toughening environmental cracking and design against fracture for many different kinds of steels Chapter 5 on bulk amorphous alloys covers the critical cooling rate and the effect of composition on glass formation and the accompanying mechanical and magnetic properties of the glasses Chapter 6 on nanocrystalline materials describes the preparation from vapor liquid and solid states microstructure including grain boundaries and their junctions stability with respect to grain growth particulate consolidation while maintaining the nanoscale microstructure physical chemical mechanical electric magnetic and optical properties and applications in cutting tools superplasticity coatings transformers magnetic recordings catalysis and hydrogen storage
