Villavicencio Carbajal, Pedro Luis López de Alba, 2009 La globalización y la necesidad de incrementar las condiciones de competitividad de las empresas y los países pusieron de manifiesto durante los años 90 la obsolescencia de los modelos de política industrial científica y tecnológica basados en la oferta de instrumentos sin discriminar sectores y regiones Se trató de modelos que poco tomaban en cuenta las diversas dimensiones que implican los procesos de innovación y las cambiantes condiciones de demanda científica y tecnológica En el libro **Sistemas de Innovación en México** Regiones redes y sectores coordinado por Daniel H Villavicencio Carbajal y Pedro Luis López de Alba se explica que la innovación es un proceso multidimensional de creación de nuevos usos del conocimiento que requiere de la combinación de factores como capital recursos humanos infraestructura y oportunidades de mercado Se afirman los autores que se requiere asimismo de procesos de aprendizaje tecnológico y organizacional de la exploración y explotación de oportunidades tecnológicas y comerciales Es una actividad que se realiza principalmente en las empresas pero que conlleva relaciones de estas con diversos actores dentro y fuera del mercado como son los clientes proveedores agencias intermedias universidades y centros de investigación Sin embargo aseguran para que una empresa logre capitalizar sus experiencias de aprendizaje y convertirlas en procesos y productos nuevos o mejorados necesita de un entorno institucional capaz de ofrecer servicios tecnológicos

programas de fomento flujos de conocimiento redes de cooperación con otros agentes entre otros incentivos. Así, al partir de la premisa de que la innovación es base de la competitividad y de la creación de nueva riqueza muchos países reformulan sus políticas de ciencia tecnología e innovación. En la década pasada con el objeto de asegurar condiciones institucionales para asegurar nuevas formas de producción, difusión y apropiación del conocimiento y nuevos mecanismos de transferencia de tecnología y de aceleración de capacidades de innovación pueden formularse algunas interrogantes para el caso de México. Existen políticas encaminadas a acelerar los procesos de innovación. Existen entornos que ofrecen condiciones favorables a la acumulación y desarrollo de capacidades tecnológicas. Cuáles han sido las vías exitosas de innovación que es necesario repetir. Los artículos reunidos en este volumen sin pretender ser exhaustivos ofrecen elementos de respuesta a estas preguntas desde diversos ángulos teóricos y abordajes empíricos. Muestran asimismo los problemas y tensiones que ocasiona la dinámica de innovación desde la perspectiva de la coevolución entre agentes públicos y privados académicos y productivos y que es necesario comprender para diseñar instrumentos de política más eficientes.

Eco-Innovación. Integrando el medio ambiente en la empresa del futuro CLAUDE FUSSLER, PETER JAMES, 1999. Esta obra explica por qué las empresas están perdiendo su capacidad innovadora y cómo esto puede convertirse en una clara desventaja comparativa a largo plazo. Se presentan los elementos internos del enfoque de la ecoinnovación para que el lector pueda llevar a cabo sus propios experimentos y en último término ofrecer buenos servicios que sean eficientes ambientalmente y a la vez rentables económicamente en otras palabras ecoeficientes. Desde una visión panorámica de las cuestiones y tendencias que configuran los mercados para productos y procesos ecoeficientes. Ecoinnovación incluye el análisis de los socios y agentes externos e internos a la empresa y del valor de asociarse con ellos. Un modelo de desarrollo y adopción tecnológica a largo plazo. La ecoempresa: una detallada explicación de las seis dimensiones de la ecoeficiencia y cómo evaluar y puntuar cada una. Información esencial sobre las tres fuerzas impulsoras que regirán el futuro: demografía, impacto ambiental y creación de valor. Cómo llevar a cabo e introducir la contabilidad ambiental en la empresa. Informes sobre el Programa de Naciones Unidas para la producción limpia y el concepto de ecoeficiencia del Consejo Mundial Empresarial para el Desarrollo Sostenible. Estudio de casos concretos de empresas que lograron la ecoeficiencia e importantes avances innovadores. Algunas opiniones acerca de este libro. Fussler muestra la dirección que probablemente tomará la innovación industrial. Si no lee este libro puede perder el tren. Ernst Ulrich von Weizsäcker, Presidente del Instituto Wuppertal para el Clima, el Medio Ambiente y la Energía. Estoy convencido de que las empresas del futuro serán aquellas que comprendan y practiquen el concepto de ecoeficiencia. Este libro explica de forma clara y concisa cómo la ecoeficiencia impulsa las operaciones empresariales, contribuye al medio ambiente y mejora la calidad de vida. L. D. DeSimone, Presidente y Director Ejecutivo de 3M. Presidente del Consejo Mundial Empresarial para el Desarrollo Sostenible. Una guía para aquellos que ejercen la práctica ambiental. Claude Fussler se basa en su experiencia profesional en una empresa líder a nivel internacional para inspirar a otras personas a incorporar los aspectos ambientales.
