Experimental Thermodynamics of Non reacting Fluids focuses on experimental methods and procedures in the study of  
thermophysical properties of fluids The selection first offers information on methods used in measuring thermodynamic  
properties and tests including physical quantities and symbols for physical quantities thermodynamic definitions and  
definition of activities and related quantities The text also describes reference materials for thermometric fixed points  
temperature measurement under pressures and pressure measurements The publication takes a look at absolute  
measurement of volume and equation of state of gases at high temperatures and low or moderate temperatures Discussions  
focus on volumes of cubes of fused silica density of water and methods of measuring pressure The text also examines the  
compression of liquids and thermodynamic properties and velocity of sound including thermodynamics of volume changes  
weight methods and adiabatic compression The selection is a dependable reference for readers interested in the
