Counterpoint To A City:

City Symphonies Daniel P. Schwartz, 2024-04-23 Cinema scholars categorize city symphony films of the 1920s and early 1930s as a subgenre of the silent film Defined in visual terms the city symphony organizes the visible elements of urban experience according to musical principles such as rhythm and counterpoint In *City Symphonies* Daniel Schwartz explores the unheard sonic dimensions of these ostensibly silent films The book turns its ear to the city symphony as an audible phenomenon one that encompasses a multitude of works beyond the cinema such as musical compositions mass spectacles radio experiments and even paintings What these works have in common is their treatment of the city as a medium for sound The city is neither background nor content rather it is the material through which avant garde works express themselves In resonating through the city these multimedia pieces perform experiments that undermine the borders between sight and sound Applying an interdisciplinary approach *City Symphonies* expands our understanding of the genre breaking out of the confines of the cinema and onto the street

The College of the City of New York ... Public Organ Recitals, 1918 [Big House Little City](#) Benedict Zucchi, 2023-09-08 Shortlisted for the Architectural Book Awards 2024 Combining architectural and urban thinking in an unusual and engaging way this book presents an integrated approach to architectural theory and design Leon Battista Alberti's assertion in his famous Renaissance treatise that the city is like a big house and the house is in turn like a little city forms the springboard for a series of reflections on architecture's relationship with urbanism and how their once intimate symbiosis unravelled by International Style Modernism can be recovered Explicit references to Alberti's house city phrase have been made by figures as diverse as the architects Louis Kahn Aldo Van Eyck Denys Lasdun and Niels Torp and novelist Italo Calvino But as the book shows thinking of buildings as little cities provides a new lens through which to reappraise the contributions of many other architects including Le Corbusier Frank Lloyd Wright Alvar Aalto Eliel Saarinen Bernard Rudofsky Hans Scharoun Leon Krier Fumihiko Maki Charles Correa and Team 10 In doing so the author identifies common themes that form an unexpected bridgehead between the urban and architectural approaches of Antiquity the Middle Ages Renaissance and 20th century The book explores buildings from across the globe including lesser known projects such as Wright's unbuilt house in Italy or Saarinen's master

plan for Cranbrook Academy as well as more recent projects by Niels Torp Behnisch Architekten Sou Fujimoto Peter Barber and WOHA It concludes with practical case studies of residential health education and workplace projects from different countries fulsomely illustrated with many drawings and photographs These show how architectural design viewed through an urban lens provides a conceptual framework for breaking down the scale of large buildings and integrating them with their context And crucially these also show a very accessible way of explaining evolving designs to the intended users and eliciting their participation in the design process The book offers a compelling approach to the design of projects at all scales within an ecological perspective the sense that big and small cities and buildings must be approached holistically if we are to reverse the degradation and depletion of our habitat both natural and man made
