Cosmic Gamma-ray Sources:

Cosmic Gamma-Ray Sources Ka Lok Cheng, Gustavo E. Romero, 2004-10-25 Gamma ray astronomy has undergone an enormous progress in the last 15 years The success of satellite experiments like NASA's Compton Gamma Ray Observatory and ESA's INTEGRAL mission as well as of ground based instruments have opened new views into the high energy Universe Different classes of cosmic gamma ray sources have been now detected at different energies in addition to young radio pulsars and gamma ray bursts the classical ones The new sources include radio quiet pulsars microquasars supernova remnants starburst galaxies radio galaxies flat spectrum radio quasars and BL Lacertae objects A large number of unidentified sources strongly suggests that this brief enumeration is far from complete Gamma ray bursts are now established as extragalactic sources with tremendous energy output There is accumulating evidence supporting the idea that massive stars and star forming regions can accelerate charged particles up to relativistic energies making them gamma ray sources Gamma ray astronomy has also proved to be a powerful tool for cosmology imposing constraints to the background photon fields that can absorb the gamma ray flux from distant sources All this has profound implications for our current ideas about how particles are accelerated and transported in both the local and distant Universe The evolution of our knowledge on the gamma ray sky has been so fast that is not easy for the non specialist scientist and the graduate student to be aware of the full potential of this field or to grasp the fundamentals of a given topic in order to attempt some original contribution

The Universe in Gamma Rays Volker Schönfelder, 2001-08-10 After describing cosmic gamma ray production and absorption the instrumentation used in gamma ray astronomy is explained The main part of the book deals with astronomical results including the somewhat surprising result that the gamma ray sky is continuously changing

Nuclear Science Abstracts, 1975 *Observations of Cosmic Gamma-ray Sources and Their Contribution to the Diffuse Gamma-ray Background* Debadarshi Bhattacharya, 1990 Neutron Stars, Black Holes and Binary X-Ray Sources H. Gursky, Remo Ruffini, 1975-08-31 This book contains a set of articles based on a session of the annual meeting of the American Association for the Advancement of Science held in San Francisco in February 1974 The reason for the meeting arose from the need to communicate to the largest possible scientific community the dramatic advances which have been made in recent years in the understanding of collapsed objects neutron stars and black holes Thanks to an unprecedented resonance between X-ray gamma ray radio and optical astronomy and important new theoretical developments in relativistic astrophysics a new deep understanding has been acquired of the physical processes occurring in the late stages of evolution of stars This knowledge may be one of the greatest conquests of man's understanding of nature in this century This book aims to give an essential and up to date view in this field The analysis of the physics and astrophysics of neutron stars and black holes is here attacked from both theoretical and experimental points of view In the experimental field we range from the reviews and catalogues of galactic X-ray sources R Gursky and E Schreier and pulsars E Groth to the observations of the optical counter part of X-ray

sources P Boynton to finally the recently discovered gamma ray bursts I Strong and pulse astronomy R B Partridge **High Energy Transients in Astrophysics (Santa Cruz, CA, 1983)** Stanford E. Woosley, 1984 Very High Energy Cosmic Gamma Radiation: A Crucial Window On The Extreme Universe Felix A Aharonian, 2004-07-19 Gamma ray astronomy the branch of high energy astrophysics that studies the sky in energetic ray photons is destined to play a crucial role in the exploration of nonthermal phenomena in the Universe in their most extreme and violent forms The great potential of this discipline offers impressive coverage of many hot topics of modern astrophysics and cosmology such as the origin of galactic and extragalactic cosmic rays particle acceleration and radiation processes under extreme astrophysical conditions and the search for dark matter The recent observational results and exciting theoretical predictions provide a strong rationale for a deep study of cosmic radiation with forthcoming satellite borne and ground based detectors in the so called very high energy domain of the electromagnetic spectrum above 10¹⁰ eV This invaluable book presents the motivations and highlights the principal objectives of the field as well as demonstrates its intrinsic links to other branches of high energy astrophysics Preference is given to three topical areas i origin of cosmic rays ii physics and astrophysics of relativistic jets iii observational gamma ray cosmology Also an essential part of the book is devoted to the discussion of the principal mechanisms of production and absorption of energetic rays in different astrophysical environments as well as to the description of the detection methods of high energy cosmic radiation The Form of the Cosmic Gamma-ray Source Spectrum from P-p Interactions for Gamma-ray Energies Less Than 1 GeV. Floyd William Stecker, 1967 *INIS Atomindex*, 1986 **Energy Research Abstracts**, 1977 Semiannual with semiannual and annual indexes References to all scientific and technical literature coming from DOE its laboratories energy centers and contractors Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information Arranged under 39 categories e g Biomedical sciences basic studies Biomedical sciences applied studies Health and safety and Fusion energy Entry gives bibliographical information and abstract Corporate author subject report number indexes **Quarterly Bulletin of the Canadian Mining Institute** Canadian Institute of Mining and Metallurgy, Canadian Institute of Mining, Metallurgy and Petroleum, 1928 **Gamma-ray Astronomy** P. V. Ramana Murthy, A. W. Wolfendale, 1993-04 The recent launch of NASA's Gamma Ray Observatory will increase interest in gamma ray astronomy This is a fully up dated new edition of the authors earlier volume published in 1986 and covers both the background science and the current state of the art in this field The emphasis is on the astronomy and astrophysics of known sources of cosmic gamma rays outside the solar system The authors discuss the mechanisms for the production and absorption of gamma rays The gamma ray line astronomy of the interstellar medium galactic centre and various discrete sources is then considered Gamma ray bursts are treated in considerable detail in chapter three and the final two chapters describe medium energy and ultra high energy gamma rays Relevant data from supernova SN1987A is also included in this edition The book includes comprehensive references to the primary literature

together with many figures and tables The concentration on phenomenology makes this book a fine introduction to gamma ray astronomy

Wefel,2012-12-06 Proceedings of the NATO Advanced Study Institute Erice Sicily Italy April 20 30 1988 **Cosmic Gamma Rays** Floyd William Stecker,1971 The scientific potential of γ ray astronomy has long been recognized from a theoretical standpoint by investigators in the fields of cosmic ray research and high energy astrophysics Gamma ray studies can help answer questions concerning the nature and origin of cosmic rays both galactic and extragalactic the nature of supernovae pulsars and powerful radio sources the extent and importance of antimatter in the universe and the nature of the universe in the distant past The advent of satellite borne γ ray telescopes has recently made γ ray astronomy a reality The first observations as discussed in this book have already provided important information on galactic and extragalactic cosmic rays and interstellar gas These observations may also have great cosmological significance The second generation of γ ray telescopes is already in the development stage It therefore seems most appropriate at this time for a comprehensive theoretical monograph Page iii
