Handbook of Wood Chemistry and Wood Composites Roger M. Rowell, 2005-02-18 The degradable nature of high performance wood based

materials is an attractive advantage when considering environmental factors such as sustainability recycling and energy resource conservation The Handbook of Wood Chemistry and Wood Composites provides an excellent guide to the latest concepts and technologies in wood chemistry and bio based composites The book analyzes the chemical composition and physical properties of wood cellulose and its response to natural processes of degradation It describes safe and effective chemical modifications to strengthen wood against biological chemical and mechanical degradation without using toxic leachable or corrosive chemicals Expert researchers provide insightful analyses of the types of chemical modifications applied to polymer cell walls in wood emphasizing the mechanisms of reaction involved and resulting changes in performance properties These include modifications that increase water repellency fire retardancy and resistance to ultraviolet light heat moisture mold and other biological organisms The text also explores modifications that increase mechanical strength such as lumen fill monomer polymer penetration and plasticization The Handbook of Wood Chemistry and Wood Composites concludes with the latest applications such as adhesives geotextiles and sorbents and future trends in the use of wood based composites in terms of sustainable agriculture biodegradability and recycling and economics Incorporating over 30 years of teaching experience the esteemed editor of this handbook is well attuned to educational demands as well as industry standards and research trends

Handbook of Wood Chemistry and Wood Composites, Second Edition Roger M. Rowell, 2012-09-06 Wood has played a major role throughout human history Strong and versatile the earliest humans used wood to make shelters cook food construct tools build boats and make weapons Recently scientists politicians and economists have renewed their interest in wood because of its unique properties aesthetics availability abundance and perhaps most important of all its renewability However wood will not reach its highest use potential until we fully describe it understand the mechanisms that control its performance properties and finally are able to manipulate those properties to give us the desired performance we seek The Handbook of Wood Chemistry and Wood Composites analyzes the chemical composition and physical properties of wood cellulose and its response to natural processes of degradation It describes safe and effective chemical modifications to strengthen wood against biological chemical and mechanical degradation without using toxic leachable or corrosive chemicals Expert researchers provide insightful analyses of the types of chemical modifications applied to polymer cell walls in wood They emphasize the mechanisms of reaction involved and resulting changes in performance properties including modifications that increase water repellency fire retardancy and resistance to ultraviolet light heat moisture mold and other biological organisms The text also explores modifications that increase mechanical strength such as lumen fill monomer polymer penetration and plasticization The Handbook of Wood Chemistry and Wood Composites concludes with the latest applications such as adhesives geotextiles and sorbents and future trends in the use of wood based composites in terms of sustainable agriculture biodegradability and recycling and economics Incorporating decades of teaching experience the editor of this handbook is well attuned to educational demands as well as
