*Focus on Adolescent Behavior Research* Terry C. Rhodes, 2007

Developmentally, puberty is accompanied by major physical and emotional changes that alter a young person's relationships and patterns of interaction with others. The transition into adolescence begins the move toward independence from parents and the need to establish one's own values, personal and sexual identity and the skills and competencies needed to compete in adult society. Independence requires young people to renegotiate family rules and degree of supervision by parents, a process that can generate conflict and withdrawal from parents. At the same time, social networks expand and relationships with peers and adults in new social contexts equal or exceed in importance the relationships with parents. The criteria for success and acceptance among peers and adults change. Adapting to all of these changes in relationships, social contexts, status and performance criteria can generate great stress, feelings of rejection and anger at perceived or real failure. Young people may be attracted to violent behaviour as a way of asserting their independence of the adult world and its rules, as a way of gaining the attention and respect of peers as a way of compensating for limited personal competencies or as a response to restricted opportunities for success at school or in the community. Good relationships with parents during childhood will help in a successful transition to adolescence but they do not guarantee it.

This new book presents new research in the field.

Handbook of Adolescent Death and Bereavement Charles A. Corr, 1996

In this comprehensive handbook, Charles Corr and David Balk improve our understanding of the challenges faced by adolescents when coping with death, dying and bereavement. The volume is organized into three parts. Part I addresses specific issues involved in confrontations with death. Part II focuses on the role of bereavement. Part III explains specific therapeutic interventions for caregivers. The authors introduce us to adolescence as a special time in the human life cycle, a period quite separate from childhood and adulthood. They establish normative adolescent life transitions, explore differences among adolescents and explain developmental tasks that are typical of early, middle and late adolescence.
