Biology's First Law Daniel W. McShea, Robert N. Brandon, 2010-07-15 Life on earth is characterized by three striking phenomena that demand explanation adaptation the marvelous fit between organism and environment diversity the great variety of organisms and complexity the enormous intricacy of their internal structure Natural selection explains adaptation But what explains diversity and complexity Daniel W McShea and Robert N Brandon argue that there exists in evolution a spontaneous tendency toward increased diversity and complexity one that acts whether natural selection is present or not They call this tendency a biological law the Zero Force Evolutionary Law or ZFEL This law unifies the principles and data of biology under a single framework and invites a reconceptualization of the field of the same sort that Newton's First Law brought to physics Biology's First Law shows how the ZFEL can be applied to the study of diversity and complexity and examines its wider implications for biology Intended for evolutionary biologists paleontologists and other scientists studying complex systems and written in a concise and engaging format that speaks to students and interdisciplinary practitioners alike this book will also find an appreciative audience in the philosophy of science

Beyond Earth Bob Krone, 2006 This is a critical time for the space program and for all of us Even the significant steps that we have taken since the dawn of the space age in 1957 including orbital flight the Moon landings and orbiting space stations will in retrospect seem to be tiny steps compared to what lies ahead Migrating into space will challenge us beyond anything we have previously accomplished and we are destined to face adventures that are both fantastically breathtaking and supremely dangerous Beyond Earth is for everyone interested in humankind's next great adventure the human settlement of the Solar System A unique collection of world class scholars scientists engineers managers astronauts artists authors and professors examine the key questions of our unique circumstance at the dawn of a new era in space exploration and development Why does space matter to us What can we use it for How can we get there efficiently What will ordinary life be like in space What will our homes be like on the Moon On Mars In orbit Will we play Will we love The book does not stop with questions It goes beyond the dramatic the superficial and the overly technical to the prescriptive literally laying the brick and mortar for our future space faring civilisation Contributing authors come from both hard and soft sciences include education and the arts and ask children who will be the future space dwellers for their visions They document needed research There are three underlying assumptions driving this book First that the human urge for flight exploration and survival plus its curiosity about the universe are deeply embedded in our genes and in our minds Second that even if these urges were ignored the continual improvement of the quality of life for the human race on earth and perhaps even its ultimate survival hinge on the successes of human exploration and habitation of space and Third that our generation can use the opportunity presented by outwards expansion to design a rewarding and exciting future of

Sexual Paradox: Complementarity, Reproductive Conflict and Human Emergence Christine Fielder,Chris King,2006 Unlocks the keys to the paradox of how sexual selection fertilized the explosion of culture and the resulting fallout in sexual dominion of man over woman and nature How sexuality generates the universe through symmetry broken complementarity The implicit conflict of interests of sexual intrigue in the prisoners dilemma and its ecstatic resolution in the cosmology of love Sexual dominance as a koan for planetary crises 560 pages containing 270 illustrations **Religion, Materialism and Ecology** Sigurd Bergmann,Kate Rigby,Peter Manley Scott,2023-05-31 This timely collection of essays by leading international scholars across religious studies and the environmental humanities advances a lively discussion on materialism in its many forms While there is little agreement on what materialism means it is evident that there is a resurgence in thinking about matter in more animated and active ways The volume explores how debates concerning the new materialisms impinge on religious traditions and the extent to which religions with their material culture and beliefs in the Divine within the material can make a creative contribution to debates about ecological materialisms Spanning a broad range of themes including politics architecture hermeneutics literature and religion the book brings together a series of discussions on materialism in the context of diverse methodologies and approaches The volume investigates a range of issues including space and place hierarchy and relationality the relationship between nature and society human and other agencies and worldviews and cultural values Drawing on literary and critical theory and queer philosophical theological and social theoretical approaches this ground breaking book will make an important contribution to the environmental humanities It will be a key read for postgraduate students researchers and scholars in religious studies cultural anthropology literary studies philosophy and environmental studies Mercury ,2001 The Rational Universe Evolving for Humans Zhao Ding,2025-05-08 What if the development of life the birth of the earth and the emergence of humanity were all part of an intricate cosmic design timed with precision across billions of years In The Rational Universe Evolving for Humans the author explores the profound connections between the physical universe and the natural forces that shaped it From the Big Bang to the emergence of modern civilization this book uncovers the hidden patterns that have governed the cosmos from its earliest moments Blending science with philosophy the author challenges readers to consider the time effect the precise timing of every event that led to the world of today Could it all have been coincidence or is there a deeper logic at play in the natural world Whether one is a curious scientist a lover of philosophy or someone seeking a deeper understanding of our place in the universe The Rational Universe Evolving for Humans offers a compelling new perspective on the origins of human beings and civilization and the forces that continue to shape this world ISIS: International Symposium on Interdisciplinary Science Andrei Ludu,Nathan R.
