Information Retrieval Evaluation Donna Harman, 2022-05-31 Evaluation has always played a major role in information retrieval with the early pioneers such as Cyril Cleverdon and Gerard Salton laying the foundations for most of the evaluation methodologies in use today The retrieval community has been extremely fortunate to have such a well grounded evaluation paradigm during a period when most of the human language technologies were just developing This lecture has the goal of explaining where these evaluation methodologies came from and how they have continued to adapt to the vastly changed environment in the search engine world today The lecture starts with a discussion of the early evaluation of information retrieval systems starting with the Cranfield testing in the early 1960s continuing with the Lancaster user study for MEDLARS and presenting the various test collection investigations by the SMART project and by groups in Britain The emphasis in this chapter is on the how and the why of the various methodologies developed The second chapter covers the more recent batch evaluations examining the methodologies used in the various open evaluation campaigns such as TREC NTCIR emphasis on Asian languages CLEF emphasis on European languages INEX emphasis on semi structured data etc Here again the focus is on the how and why and in particular on the evolving of the older evaluation methodologies to handle new information access techniques This includes how the test collection techniques were modified and how the metrics were changed to better reflect operational environments The final chapters look at evaluation issues in user studies the interactive part of information retrieval including a look at the search log studies mainly done by the commercial search engines Here the goal is to show via case studies how the high level issues of experimental design affect the final evaluations Table of Contents Introduction and Early History Batch Evaluation Since 1992 Interactive Evaluation Conclusion

Data Mining and Reverse Engineering Stefano Spaccapietra, Fred Maryanski, 2013-03-14 Searching for Semantics Data Mining Reverse Engineering Stefano Spaccapietra Fred M aryanski Swiss Federal Institute of Technology University of Connecticut Lausanne Switzerland Storrs CT USA REVIEW AND FUTURE DIRECTIONS In the last few years database semantics research has turned sharply from a highly theoretical domain to one with more focus on practical aspects The DS 7 Working Conference held in October 1997 in Leysin Switzerland demonstrated the more pragmatic orientation of the current generation of leading researchers The papers presented at the meeting emphasized the two major areas the discovery of semantics and semantic data modeling The work in the latter category indicates that although object oriented database management systems have emerged as commercially viable products many fundamental modeling issues require further investigation Today's object oriented systems provide the capability to describe complex objects and include techniques for mapping from a relational database to objects However we must further explore the expression of information regarding the dimensions of time and space Semantic models possess the richness to describe systems containing spatial and temporal data The challenge of incorporating these features in a manner that promotes

efficient manipulation by the subject specialist still requires extensive development

Signal Detection Theory and ROC Analysis in Psychology and Diagnostics John A. Swets, 2014-02-25 Signal detection theory as developed in electrical engineering and based on statistical decision theory was first applied to human sensory discrimination 40 years ago The theoretical intent was to provide a valid model of the discrimination process the methodological intent was to provide reliable measures of discrimination acuity in specific sensory tasks An analytic method of detection theory called the relative operating characteristic ROC can isolate the effect of the placement of the decision criterion which may be variable and idiosyncratic so that a pure measure of intrinsic discrimination acuity is obtained For the past 20 years ROC analysis has also been used to measure the discrimination acuity or inherent accuracy of a broad range of practical diagnostic systems It was widely adopted by methodologists in the field of information retrieval is increasingly used in weather forecasting and is the generally preferred method in clinical medicine primarily in radiology This book attends to both themes ROC analysis in the psychology laboratory and in practical diagnostic settings and to their essential unity The focus of this book is on detection and recognition as fundamental tasks that underlie most complex behaviors As defined here they serve to distinguish between two alternative confusable stimulus categories which may be perceptual or cognitive categories in the psychology laboratory or different states of the world in practical diagnostic tasks This book on signal detection theory in psychology was written by one of the developers of the theory who co authored with D M Green the classic work published in this area in 1966 reprinted in 1974 and 1988 This volume reviews the history of the theory in engineering statistics and psychology leading to the separate measurement of the two independent factors in all discrimination tasks discrimination acuity and decision criterion It extends the previous book to show how in several areas of psychology in vigilance and memory what had been thought to be discrimination effects were in reality effects of a changing criterion The book shows that data plotted in terms of the relative operating characteristic have essentially the same form across the wide range of discrimination tasks in psychology It develops the implications of this ROC form for measures of discrimination acuity pointing up the valid ones and identifying several common but invalid ones The area under the binormal ROC is seen to be supported by the data the popular measures d and percent correct are not An appendix describes the best current programs for fitting ROCs and estimating their parameters indices and standard errors The application of ROC analysis to diagnostic tasks is also described Diagnostic accuracy in a wide range of tasks can be expressed in terms of the ROC area index Choosing the appropriate decision criterion for a given diagnostic setting rather than considering some single criterion to be natural and fixed has a major impact on the efficacy of a diagnostic process or system Illustrated here by separate chapters are diagnostic systems in radiology information retrieval aptitude testing survey research and environments in which imminent dangerous conditions must be detected Data from weather forecasting blood testing and polygraph lie detection are also reported One of these chapters describes a general approach to enhancing the accuracy of diagnostic systems
