## Abstract

This study explores the relationship between psychological empowerment, academic persistence, future orientation, and academic adjustment in adolescents. As well as revealing the presence of gender and age differences in these variables. The study also aimed to determine whether psychological empowerment, academic persistence, and future orientation contribute to predicting academic adjustment. A total of 180 adolescents' students in grades 7 through 11 from some public middle and high schools in Kafr El-Sheikh city, Egypt, were included in the study. Scales of psychological empowerment, academic persistence, future orientation, and academic adjustment were used to collect data. The given data was examined using the appropriate statistical tests. The findings revealed a positive correlation between the studied variables. The findings also showed no differences in psychological empowerment, academic persistence, future orientation, or academic adjustment between males and females. In addition, there were no significant differences between students in middle and high school in psychological empowerment, whereas differences were found in academic persistence, future orientation, and academic adjustment in favor of high school students. Finally, the findings indicated the contribution of psychological empowerment, academic persistence, and future orientation in predicting academic adjustment. Some recommendations and suggestions were provided, considering the findings.

## 1. Introduction and Literature Review

Adolescence is one of the most sensitive stages in an individual's life due to the changes that occur in physical and mental development, in addition to social and behavioral aspects. The adolescent also realizes his interests related to study, which are then reflected in his studies later on. Therefore, it is necessary to provide appropriate psychological and academic counseling during this period to avoid mental and physical disorders later on and ensure the formation of a strong personality.

This study will address four important variables for adolescents' students, as follows:

### 1.1 Psychological Empowerment

Empowerment is a higher-order multilevel framework used to assess people as they participate in and carry out the participatory process as individuals, groups, organizations, and communities (Lardier et al., 2020). Zimmerman (2000) developed the empowerment theory, which offers a framework for comprehending and encouraging adolescents' healthy growth throughout this stage of life. Psychological empowerment is an important variable for adolescents; it enhances students' academic performance, responsible decision making, mental health, well-being, positive adjustment, motivation, self-efficacy, flexibility, self-esteem, and engagement in learning (Alomosh & Sallam, 2022; Hameili et al., 2023; Messman et al., 2022; Tseng et al., 2021; Zimmerman, 2000). As well as psychological empowerment, it prepares youth as leaders, enabling them to build group norms, team identification, and leadership competence. It also helps in understanding the community and identifying community conditions. Psychological empowerment contributes to building intergenerational partnerships, fostering confidence in communication, recognizing power differences, and exercising decision-making power. It also helps in planning for change and building community support for projects (Zimmerman et al., 2018).
