Practical Liquid Chromatography S. Perry, 2012-12-06 This book is intended to provide a practical introduction to high speed high efficiency liquid chromatography It covers modern column technology which has leapt into prominence only in the last five years and relates this to the well established thin layer techniques The development of liquid chromatography has proceeded in fits and starts over many years and in alliance with various scientific disciplines Liquid chromatography has for years fulfilled an effective role in various fields Ion exchange chromatography for example is particularly associated with the separation of the rare earths and exclusion chromatography with the fractionation of naturally occurring materials like proteins and of synthetic polymers Partition chromatography especially in the form of paper chromatography has been an indispensable tool in the study of biochemical systems while its more recent adsorption counterpart thin layer chromatography developed most rapidly within the pharmacognosic and pharmaceutical fields Until recently however liquid chromatography has not played a prominent role in the field of industrial organic analysis *Large-scale Adsorption and Chromatography* Phillip C. Wankat, 1986 **Basic Concepts Of Analytical Chemistry** S M Khopkar, 1998 Analytical Chemistry Has Made Significant Progress In The Last Two Decades Several Methods Have Come To The Forefront While Some Classical Methods Have Been Relegated An Attempt Has Been Made In This Edition To Strike A Balance Between These Two Extremes By Retaining Most Significant Methods And Incorporating Some Novel Techniques Thus An Endeavour Has Been Made To Make This Book Up To Date With Recent Methods The First Part Of This Book Covers The Classical Volumetric As Well As Gravimetric Methods Of Analysis The Separation Methods Are Prerequisite For Dependable Quantitative Methods Of Analysis Therefore Not Only Solvent Extraction Separations But Also Chromatographic Methods Such As Adsorption Partition Ion Exchange Exclusion And Electro Chromatography Have Been Included To Keep Pace With Modern Developments The Newly Discovered Techniques Such As Ion Chromatography Super Critical Fluid Chromatography And Capillary Electrophoresis Have Been Included The Next Part Of The Book Encompasses The Well Known Spectroscopic Methods Such As Uv Visible Ir Nmr And Esr Techniques And Also Atomic Absorption And Plasma Spectroscopy And Molecular Luminescences Methods Novel Analytical Techniques Such As Auger Esca And Photo Acoustic Spectroscopy Of Surfaces Are Also Included The Final Part Of This Book Covers Thermal And Radioanalytical Methods Of Analysis The Concluding Chapters On Electroanalytical Techniques Include Potentiometry Conductometry Coulometry And Voltammetry Inclusive Of All Kinds Of Polarography The Theme Of On Line Analysis Is Covered In Automated Methods Of Analysis To Sustain The Interest Of The Reader Each Chapter Is Provided With Latest References To The Monographs In The Field Further To Test The Comprehension Of The Subject Each Chapter Is Provided With Large Number Of Solved And Unsolved

Classification of chromatographic methods Chromatography is the name given to a particular family of separation techniques of great effectiveness The original method was described in 1903 by Tswett who used it for the separation of coloured substances and the name chromatography stems from this However the limitation to coloured compounds never really obtained and most chromatographic separations are nowadays performed on mixtures of colourless substances including gases Like fractional distillation chromatography relies on the relative movement of two phases but in chromatography one is fixed and is known as the stationary phase the other is known as the mobile phase Chromatographic methods may be classified first according to the nature of the mobile phase and second according to the nature of the stationary phase The mobile phase may be a liquid or a gas and the stationary phase may be a solid or a liquid There are thus four main sub divisions of the chromatographic process as set out in Table 1 1 The system is called adsorption chromatography if the stationary phase is a solid and partition chromatography if it is a liquid
